

18 Reasons I Won't Be Getting a Covid Vaccine

by Christian Elliot

See full original article at deconstructingconventional.com

I have slightly edited/compressed it to fit editorial standards on this site, but have changed none of the content. The author expressly gives permission to share on his site.

So here are the reasons I'm opting out of the covid vaccine:

#1: VACCINE MAKERS ARE IMMUNE FROM LIABILITY

The only industry in the world that bears no liability for injuries or deaths resulting from their products is vaccine makers. First established in 1986 with the National Childhood Vaccine Injury Act, and reinforced by the PREP Act, this law states that vaccine makers cannot be sued even if they are shown to be negligent. The covid vaccine makers are allowed to create a one-size-fits-all product, with no testing on sub-populations (i.e. people with specific health conditions), and yet they are unwilling to accept any responsibility for any adverse events or deaths their products cause.

If a company is not willing to stand behind their product as safe, especially one they rushed to market *and* skipped animal trials on, I am not willing to take a chance on their product.

No liability. No trust.

#2: THE CHECKERED PAST OF THE VACCINE COMPANIES

The four major companies who are making these covid vaccines either:

1. Have never brought a vaccine to market before covid (Moderna and Johnson & Johnson).
2. Are serial felons (Pfizer, and Astra Zeneca).
3. Are both (Johnson & Johnson).

Moderna had been trying to "Modernize our RNA" (thus the company name)—for years, but had never successfully brought ANY product to market. How nice for them to get a major cash infusion from the government to keep trying. In fact, all major vaccine makers (save Moderna) have paid out tens of billions of dollars in damages for other products they brought to market when they knew those products would cause injuries and death—see Vioxx, Bextra, Celebrex, Thalidomide, and Opioids as a few examples.

If drug companies willfully choose to put harmful products in the market when they *can* be sued, why would we trust any product where they have NO liability?

In case it hasn't sunk in, let me reiterate: 3 of the 4 covid vaccine makers have been sued for products

they brought to market even though they knew injuries and deaths would result.

- **Johnson & Johnson** has lost major lawsuits in 1995, 1996, 2001, 2010, 2011, 2016, 2019 (For what it's worth, J&J's vaccine also contains tissues from aborted fetal cells, perhaps a topic for another discussion)
- **Pfizer** has the distinction of the biggest criminal payout in history. They have lost so many lawsuits it's hard to count. You can [check out their rap sheet here](#). Maybe that's why they are demanding that [countries where they don't have liability protection](#) put up collateral to cover vaccine-injury lawsuits.
- **Astra Zeneca** has similarly lost so many lawsuits it's hard to count. Here's [one](#). Here's [another](#)...you get the point. And in case you missed it, the company had their covid vaccine suspended in [at least 18 countries](#) over concerns of blood clots, and they [completely botched their meeting with the FDA](#) with numbers from their study that didn't match.
- Oh, and apparently **J&J** (whose vaccine *is* approved for "Emergency Use" in the US) and **Astrazenca** (whose vaccine is *not* approved for "Emergency Use" in the US), [had a little mix up in their ingredients](#)...in 15 million doses. Oops.

Let me reiterate this point: Given the free pass from liability, and the checkered past of these companies, why would we assume that all their vaccines are safe and made completely above board? Where else in life would we trust someone with that kind of reputation? To me that makes as much sense as expecting a remorseless, abusive, unfaithful lover to become a different person because a judge said deep down they are a good person.

No. I don't trust them. No liability. No trust.

#3: THE UGLY HISTORY OF ATTEMPTS TO MAKE CORONAVIRUS VACCINES

There have been many attempts to make viral vaccines in the past that ended in utter failure, which is why we did not have a coronavirus vaccine before 2020. In the 1960s, scientists attempted to make an RSV (Respiratory Syncytial Virus) vaccine for infants. [In that study](#), they skipped animal trials because they weren't necessary back then. In the end, the vaccinated infants got much sicker than the unvaccinated infants when exposed to the virus in nature, with 80% of the vaccinated infants requiring hospitalization, and [two of them died](#).

After 2000, scientists made many attempts to create coronavirus vaccines. For the past 20 years, all ended in failure because the animals in the clinical trials got very sick and many died, just like the children in the 1960s. **You can read a summary of this history/science [here](#)**. Or if you want to read the individual studies you can check out these links:

- In 2004 attempted vaccine produced [hepatitis in ferrets](#)
- In 2005 [mice](#) and [civets](#) became sick and *more* susceptible to coronaviruses after being vaccinated
- In 2012 the [ferrets](#) became sick and died. And in [this study](#) mice and ferrets developed lung disease.
- In 2016 [this study](#) also produce lung disease in mice.

The typical pattern in the studies mentioned above is that the children and the animals produced

beautiful antibody responses after being vaccinated. The manufacturers thought they hit the jackpot. The problem came when the children and animals were exposed to the wild version of the virus.

When that happened, an unexplained phenomenon called **Antibody Dependent Enhancement** (ADE) also known as Vaccine Enhanced Disease (VED) occurred where the immune system produced a "cytokine storm" (i.e. overwhelmingly attacked the body), and the children/animals died.

Here's the lingering issue: The vaccine makers have no data to suggest their rushed vaccines have overcome that problem. In other words, never before has any attempt to make a coronavirus vaccine been successful, nor has the gene-therapy technology that is mRNA "vaccines" been safely brought to market—but hey, since they had billions of dollars in government funding, I'm sure they figured that out.

Except they don't know if they have...

#4: THE "DATA GAPS" SUBMITTED TO THE FDA BY THE VACCINE MAKERS

When vaccine makers submitted their papers to the FDA for the Emergency Use Authorization (Note: An EUA is *not* the same as a full FDA approval), among the many "Data gaps" they reported was that they have nothing in their trials to suggest they overcame that pesky problem of Vaccine Enhanced Disease. They simply don't know; they have no idea if the vaccines they've made will also produce the same cytokine storm (and deaths) as previous attempts at such products. As Joseph Mercola points out:

Previous attempts to develop an mRNA-based drug using **lipid nanoparticles** failed and had to be abandoned because when the dose was too low, the drug had no effect, and when dosed too high, the drug became too toxic. An obvious question is: What has changed that now makes this technology safe enough for mass use?

If that's not alarming enough, here are other gaps in the data—i.e. *there is no data to suggest safety or efficacy regarding:*

- Anyone younger than age 18 or older than age 55
- Pregnant or lactating mothers
- Auto-immune conditions
- Immunocompromised individuals
- **No data on *transmission* of covid**
- **No data on preventing *mortality* from covid**
- **No data on duration of protection from covid**

Hard to believe right? In case you think I'm making this up, or want to see the actual documents sent to the FDA by Pfizer and Moderna for their Emergency Use Authorization, you can check out [this](#), or [this](#). The data gaps can be found starting with page 46 and 48 respectively.

#5: NO ACCESS TO THE RAW DATA FROM THE TRIALS

Would you like to see the raw data that produced the "90% and 95% effective" claims touted in the news? Me, too. But they won't let us see that data. As pointed out in [the BMJ](#), something about the Pfizer and Moderna efficacy claims smells really funny. There were "3,410 total cases of suspected, but unconfirmed covid-19 in the overall study population, 1,594 occurred in the vaccine group vs. 1,816 in the placebo group." Wait...*what?* Did they fail to do science in their scientific study by not verifying a major variable? Could they not test those "suspected but unconfirmed" cases to find out if they had covid? Apparently not.

Why not test all 3,410 participants for the sake of accuracy? We can only guess they didn't test because it would mess up their "90-95% effective" claims. Where's the FDA? Would it not be prudent for the FDA to expect (demand) that the vaccine makers test people who have "covid-like symptoms" and release their raw data so outside third-parties could examine how the manufacturers justified the numbers? I mean it's only every citizen of the world we're trying to get to take these experimental products. Why did the FDA not require that? Isn't that the entire purpose of the FDA anyway?

Foxes guarding the hen house? Seems like it. No liability. No trust.

#6: NO LONG-TERM SAFETY TESTING

Obviously, with products that have only been on the market a few months, we have no long-term safety data. In other words, we have no idea what this product will do in the body months or years from now—for ANY population. Given all the risks above (risks that ALL pharmaceutical products have), would it not be prudent to wait to see if the worst-case scenarios have indeed been avoided? Would it not make sense to want to fill those pesky "data gaps" before we try to give this to every man, woman, and child on the planet?

Well, that would make sense, but to have that data they need to test it on people, which leads me to my next point:

#7: NO INFORMED CONSENT

What most who are taking the vaccine don't know is that because these products are still in clinical trials, anyone who gets the shot is now part of the clinical trial. They are part of the experiment. Those (like me) who do not take it, are part of the control group. Time will tell how this experiment works out.

But, you may be asking, if the vaccines are causing harm, wouldn't we be seeing that all over the news? Surely the FDA would step in and pause the distribution? Well, if the adverse events reporting system was working, maybe things would be different. But...

#8: UNDER-REPORTING OF ADVERSE REACTIONS AND DEATH

According to [a study done by Harvard](#) (commissioned by our own government), less than 1% of all adverse reactions to vaccines are actually submitted to the National Vaccine Adverse Events Reports System (VAERS) - read page 6 at the link above.

While the problems with VAERS have not been fixed (as you can read about in [this letter to the CDC](#)), at the time of this writing [VAERS reports](#) over 2,200 deaths from the current covid vaccines, as well as close to 60,000 adverse reactions.

VAERS data released today showed 50,861 reports of adverse events following COVID vaccines, including 2,249 deaths and 7,726 serious injuries between Dec. 14, 2020 and March 26, 2021.

And those numbers don't include (what is currently) [578 cases of Bell's Palsy](#).

If those numbers are still only 1% of the total adverse reactions (or .8 to 2% of what [this study](#) published recently in the JAMA found), you can do the math, but that equates to somewhere around 110,000 to 220,000 deaths from the vaccines to date, and a ridiculous number of adverse reactions. Bet you didn't see that on the news.

That death number would currently still be lower than the 424,000 deaths from medical errors that happen every year (which you probably also don't hear about), but we are not even six months into the rollout of these vaccines yet.

If you want a deeper dive into the problems with the VAERS reporting system, you can [check this out](#), or [check this out](#).

#9: THE VACCINES DO NOT STOP TRANSMISSION OR INFECTION

Wait, what? Aren't these vaccines supposed to be what we've been waiting for to "go back to normal"? Nope. Why do you think we're getting all these conflicting messages about needing to practice social distancing and wear masks AFTER we get a vaccine? The reason is because these vaccines were never designed to stop transmission OR infection. If you don't believe me, I refer you again to the papers submitted to the FDA I linked to above.

The primary endpoint (what the vaccines are meant to accomplish) is to *lower your symptoms*.

Sounds like just about every other drug on the market right? That's it: lowering your symptoms is the big payoff we've been waiting for. Does that seem completely pointless to anyone but me?

1. It can't stop us from *spreading* the virus.
2. It can't stop the virus from *infecting* us once we have it.
3. To get the vaccine is to accept all the risk of these experimental products and the best it might do is lower symptoms?

Heck, there are plenty of other things I can do to lower my symptoms that don't involve taking what appears to be a really risky product.

Now for the next logical question: If we're worried about asymptomatic spreaders, would the vaccine not make it *more* likely that we are creating asymptomatic spread? If it indeed reduces symptoms, anyone who gets it might not even know they are sick and thus they are more likely to spread the virus, right?

For what it's worth, I've heard many people say the side effects of the vaccine (especially the second dose) are worse than catching covid. I can't make sense of that either. Take the risk. Get no protection. Suffer through the vaccine side-effects. Keep wearing your mask and social distancing. And continue to be able to spread the virus. Why?

#10: PEOPLE ARE CATCHING COVID *AFTER* BEING FULLY VACCINATED

Talk about a bummer. You get vaccinated and you *still* catch covid.

- It's happening in [Washington State](#)
- It's happening in [New York](#)
- It's happening in [Michigan](#)
- It's happening in [Hawaii](#)
- It's happening in [several other states too](#).
- It happened to [80% of 35 nuns who got the vaccine in Kentucky](#). Two of them died by the way.

In reality, this phenomenon is probably happening everywhere, but those are the ones making the news now. Given the reasons above (and what's below), maybe this doesn't surprise you, but bummer if you thought the vaccine was a shield to keep you safe. It's not. **That was never the point.**

If [66% of healthcare workers in L.A.](#) are going to delay or skip the vaccine...maybe they aren't wowed by the rushed science either. Maybe they are watching the shady way deaths and cases are being reported.

#11: THE OVERALL DEATH RATE FROM COVID

According to the CDC's own numbers, covid has a 99.74% survival rate. Why would I take a risk on a product that doesn't stop infection or transmission, to help me overcome a cold that has a .26% chance of killing me (actually in my age range is has about a .1% chance of killing me and .01% chance of killing my kids but let's not split hairs here). With a bar (death rate) that low, we will be in lockdown every year...i.e. forever.

But wait, what about the 500,000 plus deaths, that's alarming right? I'm glad you asked.

#12: THE BLOATED COVID DEATH NUMBERS

Something smells really funny about this one. Never before in the history of death certificates has our own government changed how deaths are reported. Why now, are we reporting everyone who dies *with* covid in their body, as having died *of* covid, rather than the co-morbidities that actually took their life? Until covid, all coronaviruses (common colds) were never listed as the *primary* cause of death when someone died of heart disease, cancer, diabetes, auto-immune conditions, or any other major co-morbidity. The *disease* was listed as the cause of death, and a confounding factor like flu or pneumonia was listed on a separate line. To bloat the number even more, both the W.H.O. and the C.D.C. changed their guidelines such that those who are [suspected or probable](#) (but were never confirmed) of having died of covid, are also included in the death numbers.

If we are going to do that then should we not go back and change the numbers of all past cold and flu seasons so we can compare apples to apples when it comes to death rates?

According to [the CDCs own numbers](#) (scroll down to the section "comorbidities and other conditions"), only 6% of the deaths being attributed to covid are instances where covid seems to be the only issue at hand. In other words, reduce the death numbers you see on the news by 94% and you have what is likely the real numbers of deaths from just covid. [Miles: Which brings the number down from 540,000 to about 32,000, as I have pointed out in a previous paper. And that is assuming covid is a real thing to start with, any different from the common cold.]

Even if [the former CDC director](#) is correct and covid-19 was a lab-enhanced virus (see Reason #14 below), a .26% death rate is still in line with the viral death rate that circles the planet ever year.

Then there's this Fauci guy. I'd really love to trust him, but besides the fact that he hasn't treated one covid patient, you should probably know:

#13: FAUCI AND SIX OTHERS AT NIAID OWN PATENTS IN THE MODERNA VACCINE

Thanks to the Bayh-Dole Act, government workers are allowed to file patents on any research they do using tax payer funding. Tony Fauci owns over 1,000 patents (see [this video for more details](#)), including patents being used on the Moderna vaccine...*which he approved government funding for.* In fact, the NIH (which NIAID is part of) [claims joint ownership of Moderna's vaccine.](#) Does anyone else see this as a MAJOR conflict of interest, or criminal even? I say criminal because there's also this pesky problem that makes me even more distrustful of Fauci, NIAD, and the NIH in general:

#14: FAUCI IS ON THE HOT SEAT FOR ILLEGAL GAIN-OF-FUNCTION RESEARCH

What is "Gain-of-Function" research? It's where scientists attempt to make viruses *gain* functions—i.e. make them more transmissible and **deadlier**. Sounds at least a touch unethical, right? How could that possibly be helpful? Our government agreed, and banned the practice. So what did the Fauci-led NIAID do? They pivoted and [outsourced the gain-of-function research](#) (in coronaviruses no less) to China—to the tune of a \$600K grant. You can see more details, including the important timeline of these events in this [fantastically well-researched documentary](#).

Mr. Fauci, you have some explaining to do...and I hope the cameras are recording when you have to defend your actions.

#15: THE VIRUS CONTINUES TO MUTATE

Not only does the virus (like all viruses) continue to mutate, but according to world-renowned vaccine developer Geert Vanden Bossche (who you'll meet below if you don't know him) it's mutating about *every 10 hours*. How in the world are we going to keep creating vaccines to keep up with that level of mutation? We're not. Might that also explain why fully vaccinated people are

continuing to catch covid?

Why, given that natural immunity has never ultimately failed humanity, do we suddenly not trust it? Why, if I ask questions like the above, or post links like what you find above, will my thoughts be deleted from all major social media platforms? Which brings me to the next troubling problem I have with these vaccines.

#16: CENSORSHIP...AND THE COMPLETE ABSENCE OF SCIENTIFIC DEBATE

I can't help but get snarky here, so humor me. How did you enjoy all those nationally and globally-televised, robust debates put on by public health officials and broadcast simultaneously on every major news station? Wasn't it great hearing from the best minds in medicine, virology, epidemiology, economics, and vaccinology from all over the world as they *vigorously and respectfully* debated things like:

- Lockdowns
- Mask wearing
- Social-distancing
- Vaccine efficacy and safety trials
- How to screen for susceptibility to vaccine injury
- Therapeutics, (i.e. non-vaccine treatment options)

Wasn't it great seeing public health officials (who never treated anyone with covid) have their "science" questioned? Wasn't it great seeing the FDA panel publicly grill the vaccine makers in prime time as they stood in the hot-seat of tough questions about products of which they have no liability? Oh, wait: you didn't see those debates? **No, you didn't...because they never happened.**

What happened instead was heavy-handed censorship of all but one narrative. Ironically, [Mark Zuckerberg can question vaccine safety](#), but I can't? Hypocrite? When did the first amendment become a suggestion? It's the FIRST amendment Mark—the one our founders thought was *most* important. With so much at stake, why are we fed only *one* narrative? Shouldn't many perspectives be heard and professionally debated?

What has happened to science? What has happened to the scientific method of always challenging our assumptions? What happened to lively debate in this country, or at least in Western society? Why did anyone who disagrees with the WHO or the CDC get censored so heavily? Is the science of public health a religion now, or is science supposed to be about debate? If someone says "the science is settled" that's how I know I'm dealing with someone who is closed minded.

By definition science (especially biological science) is *never* settled. If it were, it would be dogma, not science.

#17: THE WORLD'S LEADING VACCINOLOGIST IS SOUNDING THE ALARM...

Here is what may be the biggest reason this covid vaccine doesn't make sense to me. When someone who is very pro-vaccine, who has spent his entire professional career overseeing the development of vaccines, is shouting from the mountaintops that we have a major problem, I think the man should be

heard. In case you missed it, and in case you care to watch it, [here is Geert Vanden Bossche](#), explaining:

1. Why the covid vaccine may be putting so much pressure on the virus that we are accelerating it's ability to mutate and become more deadly.
2. Why the covid vaccines may be creating vaccine-resistant viruses (similar to anti-biotic resistant bacteria).
3. Why, because of previous problems with Antibody Dependent Enhancement, we may be looking at a mass casualty event in the next few months/years.

If you want to see/read about a second, and longer, interview with Vanden Bossche, where he was asked some tough questions, you can [check this out](#). If half of what he says comes true, these vaccines could be the worst invention of all time. If you don't like his science, take it up with him. I'm just the messenger. But I can also speak to covid personally:

#18: I ALREADY HAD COVID

I didn't enjoy it. It was a nasty cold for two days:

- Unrelenting butt/low-back aches
- *Very* low energy.
- Low-grade fever.

It was weird not being able to smell anything for a couple days. A week later, coffee still tasted a little "off." But I survived. Now it appears (as it always has) that I have [beautiful, natural, life-long immunity](#)...not something likely to wear off in a few months as it would if I got the vaccine.

In my body, and my household, covid is over. In fact, now that I've had it, there is evidence the covid vaccine [might actually be more dangerous](#) for me. That is not a risk I'm willing to take.

Miles: this is the first article I have reprinted from another website. But I think it makes a strong and easily scannable case against the vaccine, and so complements the recent article I have published on vaccine injuries. This topic is so important I don't want to miss an opportunity to share good research.
