

Global Business Network

part 2

Published on 7 April 2021

The first part of the paper was focused on Global Business Network to show you who the architects of the Matrix and planners of Covid are, and how they get together. This addendum is about a few other details related to those *Global Trends* and other reports from pages 1 and 2 above. It is interesting, though, that it is already April 2021 and the newest National Intelligence Council's *Global Trends* report hasn't been released yet, despite a new president being sworn in.

The Conjuror

In case you are wondering where I got the header image for part 1 (a painting called *The Conjuror*), I got it from a document which is part of an article from *The Guardian* that Miles mentioned in his paper *Learn to Recognize Government Disinformation*. The title of the article is *How Covert Agents Infiltrate the Internet to Manipulate, Deceive, and Destroy Reputations*. One of the images features **Global Trends** (and **Magic**, which is practiced by magicians, i.e. spooks, members of The Network).

The name of the document, which the article is based upon, is called *The Art of Deception: Training for a New Generation of Online Covert Operations*. It is here that I found the header image. I think the message is clear. Even though this is supposed to be aimed at GCHQ's and NSA's online activities, it applies to all spook agencies, and all the media. I strongly suggest you to read the document, the article, and Miles's paper and let those things sink into your head. If you want some good videos related to this, you can watch everything **Derren Brown**. Yes, he is an upper-class boy, and you have to take into consideration what Miles taught you, but I found his videos entertaining and educational enough, especially the older ones. Here is a quote on pickpocketing from one of his *Mind Control* shows: “The skill itself is a physical version of what salesmen and advertisers do to us all, keeping us distracted,

bewildering us with information, quietly taking our money.” Which is exactly what Covid and other fakes are about. Another, more recent quote: “The next 30 years are going to be even more interesting than the 30 years just gone.” This was said by Alex Younger in September 2020 in a *Financial Times* interview. He was head of MI6 until recently. Both MI5 and MI6 got new chiefs last year, by the way. Which leads us to the next topic.

Strategic Shocks

While the American spooks have their *Global Trends* reports, the British named theirs *Global Strategic Trends* reports. In the 2006 and 2010 UK reports, they talk about so called **strategic shocks** – single events which can provide discontinuities that cut across existing trends and re-shape the strategic environment. Historic examples of these **high-impact low probability (expected or unexpected)** events include the **collapse of the Berlin Wall**, the **9/11 terrorist attacks**, and the **2007–2008 financial crisis**. We can count in also Covid, of course. All these events were pre-planned/fake. The ruling families have certain goals in mind and they need a strategy on how to reach those goals. This is where strategic shocks come into play. They have a cascade effect, leading to **multiple, apparently unconnected and unforeseen changes**. They transform the strategic context, **changing behaviour** and activity across the board. Complex, interconnected global systems, such as energy and food supply lines, and global communications system, may also be at risk of **systemic failure**. Global interdependence and reliance on complex systems is likely to continue to increase, which may make future strategic shocks and systemic failures “more frequent and pervasive than in the past”. Among “credible” strategic shocks we find:

- 1) **Collapse of global communications.** The destruction of satellites following an orbital electromagnetic pulse detonation or solar flare, or the complete overload of the global ICT infrastructure, that would cause trade, commerce and the Internet to grind to a halt
- 2) **External influences.** Events that are broadly outside the control of society, but would have considerable impact; a highly lethal pandemic, a geological or meteorological event of unprecedented scale, or the discovery of non-terrestrial intelligent life. We have seen a new wave of UFO propaganda during Covid – I suggest you read the papers NRO 1 & 2 for more about this psyop
- 3) **Global pandemic.** Possibly including the collapse of the highly integrated global economy, with its complex networks of interdependent relationships. A major pandemic may be the instrument that causes a reverse in the process of globalization as national responses to contain infection will involve significant restrictions on personal mobility and interaction over a lengthy period.
- 4) **Globalized economic collapse.** A severe pricing shock, possibly caused by an energy spike or a series of harvest failures, could trigger a domino effect involving the collapse of key international markets across a range of sectors; sophisticated societies that depend on complex, transnational networks for the supply of basic human needs, such as food that cannot be provided indigenously, are likely to face severe infrastructure failure, collapse of public services and societal conflict), **new source of energy/revolution in the supply of energy** (think about electric vehicles, solar panels and similar).

Here are more examples of *credible strategic shocks*, *systemic failures*, *major discontinuities*, *surprises*, and *potential black swans* that could happen in the future according to scenarios in those US and UK reports:

- 1) **Major financial crisis.** A new Bretton Woods, digital currencies.
- 2) **Nuclear weapons use.** Space, ocean, and near coastal bottlenecks could be areas of nuclear use with little human collateral damage.
- 3) **Climate change, cyber attack, solar geomagnetic storm** that could knock out satellites, the electric grid, and many sensitive electronic devices.
- 4) **Food shortage** due to wheat rust etc.; but don't worry, **Gates** has already been investing in **lab-grown meat**, **synthetic palm oil**, and **synthetic biology** in general, which is the next big opportunity for investors, since they obviously plan to disrupt the food chain by offering their cheaper fake food; he has also become the **biggest farmland owner** in the USA. This should also remind you of the opening scene in *Blade Runner 2049*: “The collapse of ecosystems in the mid 2020s led to the rise of industrialist Niander Wallace, whose mastery of synthetic farming averted famine”; I'm sure you get the message.
- 5) **Impact of large asteroid or comet.** They have been pushing this story for decades, recently with films like *Greenland* and *Collision Earth*.
- 6) **Extreme and prolonged drought, crop plague, tsunamis, and geoengineering**, using techniques to alter temperature and rainfall patterns such as injecting aerosols in the stratosphere, chemically brightening marine clouds, and installing space-mirrors in orbit. Geoengineering, such as “chemtrails”, has been done for decades, it is nothing new; **Gates** has been funding **solar geoengineering**.

The **World Economic Forum** is already **warning** us that “**a COVID-like global cyber pandemic is coming**”, an “**inevitable global cyberattack** [...] that will spread faster and further than a biological virus, with an equal or greater economic impact [...] The whole world could experience **cyber lockdown** until a digital vaccine was developed. All business communication and data transfers would be blocked. **Social contact would be reduced to people contactable by in-person visits, copper landline, snail-mail or short-wave radio** [...] A **21-day** global cyber lockdown could cost over \$1 trillion”, adding that “COVID-19 was a known and anticipated risk. So, too, is the digital equivalent. Let's be better prepared for that one”. Another racket. These guys are unbelievable. In such case, key infrastructure as well as private homes (houses or blocks of flats) would mostly need to use power generators, and those run on petrol or diesel. Which means that although oil companies lost money during Covid because of lockdowns, they would more than cover this loss with a fake cyber pandemic. And after this fake would be over, a lot of people would probably rush to buy those roof solar panels, which is a double win for the merchant elite.

A similar warning was given in that Rockefeller Foundation's **report** from 2010 with the Covid-like scenario: “**Scenarios are a medium through which great change can be not just envisioned but also actualized. The more closely you read them, the more likely it becomes that you will recognize their important but less obvious implications to you, your work, and your community.** We strongly encourage you to share and discuss this report widely, use it as a springboard for further creative thinking about how technology could shape development, **and test and adjust your strategies or personal actions accordingly.**” You read above which cards they have left to play, so you can plan accordingly.

A fake nuclear attack could happen already within this decade. If you take a look at the NIC's **2008** report *Global Trends 2025: A Transformed World* (that will emerge after the *NIC 2020 Project*, aka Covid), nuclear weapons use is an option:

2025 – What Kind of Future?

The above trends suggest major discontinuities, shocks, and surprises, which we highlight throughout the text. Examples include **nuclear weapons use** or a **pandemic**.

In some cases, the surprise element is only a matter of timing: **an energy transition**, for example, is inevitable; the only questions are when and how abruptly or smoothly such a transition occurs. An energy transition from one type of fuel (fossil fuels) to another (alternative) is an event that historically has only happened once a century at most with momentous consequences.

In the four fictionalized scenarios, we have highlighted new challenges that could emerge as a result of the ongoing global transformation.

Pandemic: ticked. Energy transition from fossil fuels to other ones: ticked. Event that happens once per century: ticked. Nuclear weapons use: unticked, for now. If you go through those US and UK reports, Russia plays the role of a villain that could cause a cyber or nuclear attack. This story about nuclear bombs linked to Russia has been pushed also in *Mission Impossible* movies *Ghost Protocol* (2011) and *Fallout* (2018). In the last one, a villain says: “The old world order needs dismantling, and we have the tools to dismantle it.” In the movie, a network of rogue spooks is making terrorist acts in order to *destroy* the 'old world order', while in the real world, a Network of Families is making fake events in order to *create* the 'new world order'. The newest MI movie is supposed to come out in November. Although there is no information about the plot yet, they did release a **parody** last year that is narrated by Cruise himself. It is titled “Mission Impossible 7 Bomb Run Parody” featuring a “very big bomb in the middle of Times Square” that could kill millions of innocent people. The New START nuclear treaty between the US and Russia was supposed to expire two months ago, but it was extended until February **2026** (right at the time of the next solar minimum). Next year will mark the 60th anniversary of the fake Cuban Missile Crisis, so that was a close call. You can [see other clues](#) if you [google up more](#) about [this topic](#). One of the scenarios in the last NIC report from 2017 features “a nuclear weapon used in anger, which turns out to concentrate global minds so that it does not happen again”. Plus, the new MI movie is being shot again in Norway, where massive **military exercises** have been going on in recent years, so the Arctic could be the next scripted battlefield.

Speaking of *Mission Impossible*, the plot of the second movie, released in **2000**, revolves around a company that wants to make a pandemic so they can profit from the vaccines. Sounds familiar, wouldn't you say? The year **2000** was when the NIC's pioneering [report](#) on the global infectious disease threat was published, and the **Gates Foundation** and **Gavi, the Vaccine Alliance** were established. In **2010** (when the **Rockefeller Foundation's** [paper](#) with the Covid-like scenario was released), **Moderna** was founded. That same year the Gates Foundation started its **Decade of Vaccines** (2010+10=2020) along with the **WHO**. The Gates Foundation is one of Moderna's **strategic collaborators**, advancing its mRNA-based projects for various infectious diseases. Moderna is one of the top three manufacturers of the Covid vaccine.

According to the article [The Next Act for Messenger RNA Could be Bigger Than Covid Vaccines](#), published by *MIT Technology Review* in February 2021:

In the near future, researchers believe, **shots that deliver temporary instructions into cells** could lead to vaccines against herpes and malaria, better flu vaccines, and, **if the covid-19 germ keeps mutating, updated coronavirus vaccinations**, too.

But researchers also see a future well beyond vaccines. They think the technology will permit cheap **gene fixes** for cancer, sickle-cell disease, and maybe even HIV.

Despite those two decades of research, though, **messenger RNA had never been used in any marketed drug before last year**.

The first attempt to use synthetic messenger RNA to make an animal produce a protein was in 1990. It worked, but a big problem soon arose. The injections made mice sick [...] “We quickly realized that messenger RNA was not usable” [...]

The eureka moment was when the two scientists determined they could avoid the immune reaction by using chemically modified building blocks to make the RNA. It worked. **Soon after, in Cambridge, a group of entrepreneurs began setting up Moderna Therapeutics** to build on Weissman’s insight.

Vaccines were not their focus. At the company’s founding in 2010, its leaders imagined they might be able to use RNA to replace the injected proteins that make up most of the biotech pharmacopoeia, essentially producing drugs inside the patient’s own cells from an RNA blueprint. “We were asking, could we turn a human into a bioreactor?”

If so, the company could easily name 20, 30, or even 40 drugs that would be worth replacing. But Moderna was struggling with how to get the messenger RNA to the right cells in the body, and without too many side effects. Its scientists were also learning that administering repeat doses, which would be necessary to replace biotech blockbusters like a clotting factor that’s given monthly, was going to be a problem. “We would find it worked once, then the second time less, and then the third time even lower,” says Afeyan. “That was a problem.”

Moderna pivoted. What kind of drug could you give once and still have a big impact? The answer eventually became obvious: a vaccine. With a vaccine, the initial supply of protein would be enough to train the immune system in ways that could last years, or a lifetime.

A second major question was how to package the delicate RNA molecules, which last for only a couple of minutes if exposed. Weissman says he tried 40 different carriers [...] Most promising were nanoparticles made from a mixture of fats. But these were **secret commercial inventions** and are still the basis of patent disputes. Weissman didn’t get his hands on them until 2014, after half a decade of attempts.

Since BioNTech/Pfizer’s and Moderna’s mRNA vaccines use *lipid (=fats) nanoparticles* (which **easily enter brain tissue**) as mRNA carriers, and **an immune reaction is occurring during the second dose of the Covid vaccines to these nanoparticles**, does this pose a safety concern to vaccine recipients? A very important [question](#).

Miles recently [wrote](#) that his “ex’s new partner just had a **stroke after taking the vaccine**. He is in the hospital with his entire left side collapsed”. Well, strokes happen also because of *blood clots*, and “vaccinations with the AstraZeneca COVID-19 shot were put on hold in countries across Europe following reports of *rare blood clots*, low platelets, and hemorrhage”. Although the European Medicines Agency is denying the connection, “Norwegian experts” [say](#) that they are sure those adverse events were triggered by AstraZeneca’s Covid vaccine. Three Norwegian health workers were hospitalized, and one died, having “*blood clots* in unusual places, such as their stomachs and **brains**”. According to UK’s [Medicines and Healthcare Products Regulatory Agency](#) (see the totals at the bottom of the three 'analysis print' files) there have been in total **116,632** reports of reactions, **404,525** reactions and **594** reports of fatal outcomes (deaths) because of the Covid vaccines used in the UK up to 14 March 2021, and according to [EudraVigilance](#) (European database of suspected adverse drug reaction reports; scroll down to Covid-19 vaccine / mRNA vaccine) there have been in total **238,949** individual cases of reactions and **5365** deaths up to 27 March 2021 in the EU (Go to: Number of individual cases for a selected reaction (top row) > Reaction Groups (left window) > Outcome – Fatal (bottom of page); the calculations are mine and were done on 28 March 2021; interpretations of these results may vary). These are just the *reported* cases so far, just in Europe, so god knows how many more people died and suffered injuries around the world, and how many more will in the following months. For more about

this, see the paper *Evidence of Covid-19 Injuries & Deaths*, published on Miles's website.

But back to quotes from the MIT Review:

When he finally did, he loved what he saw. “They were better than anything else we had tried,” he says. “It had what you wanted in a drug. High potency, **no adverse events**.” [...] It quickly published results of an early human test of a new mRNA influenza vaccine and would initiate a large series of clinical studies involving diseases including Zika.

Pivoting to vaccines did have a drawback for Moderna. Andrew Lo, a professor at MIT’s Laboratory for Financial Engineering, says that **most vaccines lose money** [...] Lo calculated that vaccine programs for emerging threats like Zika or Ebola, **where outbreaks come and go**, would deliver a **-66% return on average**. “**The economic model for vaccines is broken**,” he says. [Not if “Covid” keeps “mutating”.]

On the other hand, vaccines are more predictable.

Vaccines offered Moderna’s CEO, Bancel, a chance to advance a phalanx of new products.

Since every vaccine would use the same nanoparticle carrier, they could be rapidly reprogrammed, as if they were software. (Moderna had even trademarked the name “mRNA OS,” for operating system.) [Keep in mind that Gates (=Microsoft) is funding them.]

Is messenger RNA really a better vaccine? The answer seems to be a resounding yes. **There are some side effects** [...]

The potency of the shots, and the ease with which they can be reprogrammed, mean researchers are already preparing to go after **HIV**, herpes, infant respiratory virus, and **malaria** – all diseases for which there’s no successful vaccine. Also on the drawing board: “**universal**” **flu vaccines** and what Weissman calls a “**pan-coronavirus**” **shot that could offer basic protection against thousands of pathogens in that category, which have led not only to covid-19 but, before that, to the infection SARS and probably other pandemics throughout history.**

“**You have to assume we’re going to have more**,” Weissman says. “**So instead of shutting down the world for a year while you make a new vaccine, we’ll have a vaccine ready to go**.” [Sounds like Gates. And he’s financing them.]

Last spring, Bancel began petitioning the government to pay for vast manufacturing centers to make messenger RNA. **He imagined a megafactory that “companies could use in peacetime” but that could be quickly reoriented to churn out shots during the next pandemic. That would be insurance, he says, against a nightmare scenario of a germ that spreads as fast as covid but has the 50% fatality rate of Ebola. If “governments spend billions on nuclear weapons they hope to never use” [...] then “we should equip ourselves so this never happens again.”**

Later that month, as part of Operation Warp Speed, the US effort to produce the vaccines, Moderna was effectively picked as a national champion to build such centers. **The government handed it nearly \$500 million to develop its vaccine and expand manufacturing.** [It reminds me on [Elon Musk's empire](#), generously subsidized by the taxpayers, as well. Tesla's [cheapest](#) car costs \$40k, which means it is out of reach for most Americans, so they have no use for it. Just as they have no use for those Covid vaccines.]

After the covid vaccines, some researchers expect Moderna and BioNTech to return to their original plans for the technology, **like treating more conventional ailments such as heart attacks, cancer, or rare inherited diseases. But there’s no guarantee of success in that arena.**

“Although there are a lot of potential therapeutic applications for synthetic mRNA in principle, in practice **the problem of delivering sufficient amounts of mRNA to the right place in the**

body is going to be a huge and possibly insurmountable challenge in most cases” [...]

There is one application in addition to vaccines, however, where brief exposure to messenger RNA could have effects lasting years, or even a lifetime.

In late 2019, before covid-19, the US National Institutes of Health and the Bill and Melinda Gates Foundation announced they would spend \$200 million developing affordable **gene therapies** for use in sub-Saharan Africa. The top targets: HIV and sickle-cell disease, which are widespread there.

Gates and the NIH didn't say how they would make such cutting-edge treatments cheap and easy to use, but Weissman told me that **the plan may depend on using messenger RNA to add instructions for gene-editing tools like CRISPR to a person's body, making permanent changes to the genome. Think of mass vaccination campaigns, says Weissman, except with gene editing to correct inherited disease.**

What all this means is that the **fatty particles of messenger RNA may become a way to edit genomes at massive scales**, and on the cheap. A drip drug that allows engineering of the blood system could become a public health boon **as significant as vaccines.**

Moderna and BioNTech have been selling their covid-19 vaccine shots for \$20 to \$40 a dose.

What if that were the cost of genetic modification, too?

Fatty particles a way to edit genomes at massive scales? We saw above what those lipids do to brains after the Covid vaccine. So either they kill you or they alter your genes, probably making you sick, killing you slowly over a longer period of time rather than shorter, as Covid vaccines do.

There are fantastic fortunes to be made in mRNA technology. At least five people connected to Moderna and BioNTech are now **billionaires**, including Bancel.

Because that is what is important to these people: fantastic fortunes. . . and mass murder.

The above article on mRNA and Moderna takes us to two very important quotes from US National Intelligence Council's Global Trends reports:

***Biotechnologies* are at an inflection point, where advances in genetic testing and editing – catalyzed by the new methods to manipulate genes – are turning science fiction into reality [...]** Such capabilities open the possibility of much more tailored approaches to enhancing human capabilities, **treating diseases**, extending longevity, or boosting food production. (*Global Trends*, 2017, p. 15)

New discoveries in the biological sciences hold promise for more rapidly identifying pathogens and **developing targeted therapeutics and vaccines**; however, such advances may be inadequate to keep up with the threat. Drug-resistant forms of diseases previously considered conquered, such as tuberculosis, gonorrhea, and staphylococcus aureus could become widespread, markedly increasing health-care costs and returning large segments of populations to the equivalent of the pre-antibiotic era.

Advances in genetic engineering by 2030 may enable tens of thousands of individuals to synthesize and release novel pathogens, compounding the already formidable naturally occurring threat.

(*Pandemics: Unanswered Questions*, *Global Trends*, 2012, p. 13)

What? Are they basically saying that genetic engineered drugs will make tens of thousands of people (more) sick and they will spread that sickness to others? That would make a *real* healthcare crisis. But how can you call that advancement? Sounds like Moderna's “bioreactor” concept, remember? Just that the outcome won't be a healthy population producing antibodies to certain diseases, but a growing

number of sick people, who were treated with a toxic mixture of chemicals sold as vaccines or gene therapies in order to get rid of the “surplus”.

Could it be a coincidence that the [plot](#) of the new James Bond movie *No Time to Die*, which was supposed to be released in [April last year](#), [right at the start of the Covid fake](#), is about **genetic warfare**? I don't think so. Mind also what they say in *Esquire*: “Spectre, and the focus on Blofeld's global surveillance network, **never managed to conjure enough peril to compel audiences**. The idea of a murky, **existential** villain **might bring things back to life**.” They have been giving us clues in these spook movies for years, but don't expect any James Bond, Ethan Hunt or Batman to save your ass. You should rather start listening to your Muse.

Finally, all of the above brings us back to a quote from Garreau's article on GBN:

After listening to a few [Genentech](#) scientists at a GBN conclave **talk seriously about someone creating a slave class of genetically modified chimps**, very little else a corporate officer hears at a GBN meeting seems preposterous.

Genentech was bought by **Roche** in **2009** for almost 50 billion dollars. They are the ones who created Tamiflu, the drug recommended by WHO, CDC, ECDC and others for the treatment of the fake H1N1 flu pandemic in **2009**, and its stockpiling as a measure to get over the fake crisis. It turned out it was [just as effective as aspirin](#), while billions of dollars were spent for it by governments around the world. Before that, it was virtually [unknown](#). So these same scammers were discussing about creating a slave class of genetically modified chimps, which means they were actually talking about *humans*.

Plus, if you read again the above quote about the “GBN **conclave**”, it should remind you of [Spectre's meeting](#) in **Rome** where we learn that they control “70% of [antimalarial](#) vaccines, 34% of [HIV](#), and 40% of all [oncological](#) drugs across [Sub-Saharan Africa](#). But we face challenges from the WHO in their campaign against our [counterfeit pharmaceuticals](#)”. Sounds like the [plan](#) of the “[notoriously secretive](#)” Moderna, since they are into new [counterfeit](#) mRNA [HIV](#) vaccines, [cancer](#) vaccines, they are after [malaria](#), and they plan to offer cheap gene therapies to people in [Sub-Saharan Africa](#), as you read above.

**The part about Moderna was inspired also by a [comment](#) on Cutting Through the Fog.*

New Financial Order

A few quotes from the NIC's [2008](#) and [2017](#) report:

We see the next 15–20 years as one of those great historical turning points **where multiple factors are likely to be in play**. (p. 23, 2008)

The crisis has increased calls for **a new “Bretton Woods”** to better regulate the global economy. (p. 30, 2008)

The effects of new ICTs on the financial sector, in particular, are likely to be profound. New financial technologies – including **digital currencies, applications of “blockchain” technology for transactions**, and AI and big data for predictive analytics – will reshape financial services, **with potentially substantial impacts on systemic stability and the**

security of critical financial infrastructure. (p. 15, 2017)

Well, look at that, in **October** 2020 the IMF director said in a [speech](#) that we face “a new Bretton Woods moment”. That same month the IMF also held an online conference titled *Cross-Border Payments – A New Beginning* (= a variant of 'new day', 'new dawn', which tells you it is another fake revolution, financial in this case). A blogger from England made an interesting [post](#) about this topic, saying that “[a]s the world continues to be enveloped by Covid-19 hysteria, behind the scenes central banks are quietly progressing on two fronts – **the renewal of payment systems and plans for the issuance of central bank digital currency.** Both of which appear to go hand in hand”.

From the ashes of the old fiat currencies order, the new digital currencies order will emerge. The phoenix tells us it will be controlled by the same old merchant families. Since Bretton Woods happened after WWII, and they are calling for a Green New Deal, I can imagine the new financial order will come to fruition after a major fake war or another global financial crisis. This is probably why governments around the world have taken so much debt recently, officially due to Covid. I assume it is being done purposely to justify more easily the coming crash and the creation of a new monetary and fiscal order, getting an even greater control over people's lives. Covid serves as a good starter and cover for this.

Central bank digital currencies are being pushed now by the **Bank for International Settlements**, which has 3 global offices in Basel, Ciudad de Mexico and Hong Kong. Connecting them, you get a nice triangle with the **Mediterranean Sea = Phoenicians** in the center of it.

“Shift” in Global Power

We will start with three quotes, two from the [2010](#) UK trends report and one from the [2017](#) US trends report:

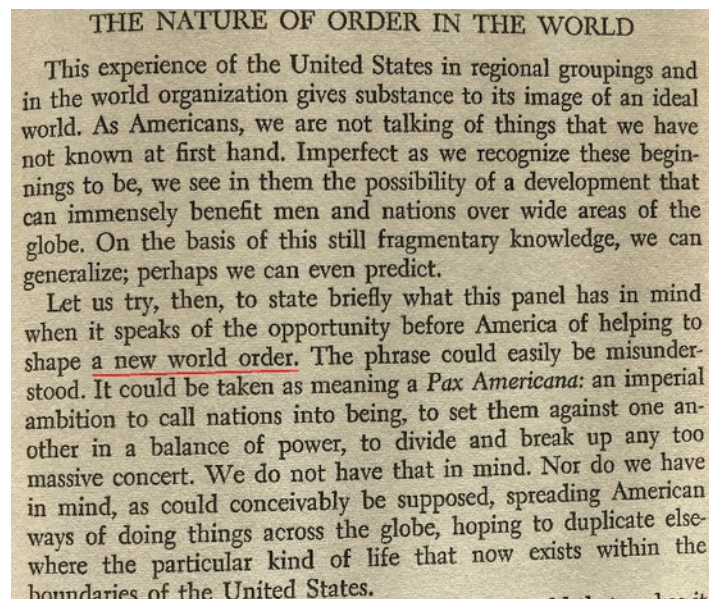

The era out to 2040 will be a **time of transition** [...] During this timeframe the world is likely to face [...] **shifts in global power from West to East.** (p. 11, 2010)

The global recession of 2008–2009 is illustrative of the probable response to, and effects of, future recessions. **Its overall effect is probably to accelerate the shift of power from**

Europe/US towards Asia, and to diminish Western soft power by making its economic and financial systems less attractive. (p. 129, 2010)

For better and worse, **the emerging global landscape is drawing to a close an era of American dominance following the Cold War.** So, too, perhaps is the rules-based international order that emerged after World War II. **It will be much harder to cooperate internationally and govern in ways publics expect.** (p. ix, 2017)

Based on what you've learned so far, you can logically assume that this shift was planned long ago. The plan was laid out, for example, in **Rockefeller Brothers Fund's Special Studies Project** from the **1950s**. I found out about this several years ago in a blog post *[The Rockefeller Plan for the BRICS New World Order, in their own words](#)*. The author (controlled opposition in my opinion, so reader beware) examines a book called *Prospect for America: The Rockefeller Panel Reports*. After I had read the blog, I had a feeling this book would soon disappear from Amazon, so I bought it. It was worth around \$30, while today there are 3 copies left on Amazon and each costs \$900, unless you can find a cheaper version somewhere else. I will now include just a few relevant photos (the first two from my book), but you can read the whole story in that blog post, or, even better, read the book. I haven't read it yet. Photo 1 (p. 35) and 2 (p. 37):

Yeah, right. That is *exactly* what they did.

IV. The Communist Threat

The American objective of a global community at peace confronts the world as it actually exists, with its ideological conflicts, its propagandas, its economic inequalities, and its menacing arms race. The goal as we have described it in preceding sections can be sought only by taking these into account. Coming thus from a statement of the ideal to a consideration of actual circumstances, we cannot but be conscious of a descent from uncluttered space into an atmosphere full of troubles and ambiguities.

Yet that is no reason either to despair of the ultimate goal or to lack resolution for facing immediate necessities. Foreign policy, especially in such an age as ours, must be carried on with a two-fold sense of time. There are things that must be done in the present—and nothing should cause the prudent statesman to defer them; there are other things that must wait. Time gained can, if we use it well, provide an opportunity for the working out of slowly maturing forces that can transform the world scene and perhaps bring mankind back from the abyss into which it now peers.

The great and immediate threat is posed, obviously, by the Communist rulers of Russia and China. There are other problems

Photo 3 and 4 (p. 75) from chapter VI. Elements of a **New World**.

The recent tendency for American exports to decline in relation to imports and the significant symptom of the drain on United States gold indicate how the world economic system is changing. The United States will need to make adjustments to such a developing situation; the important thing is that these adjustments be made in a way that does not thwart economic growth elsewhere in the world. The degree of our support of defense establishments in other countries can well be re-examined now that many of these countries have achieved a substantial economic revival. But the main answer to such a symptom as the drain on gold is not in policies of withdrawal or protectionism; it is in maintaining efficient standards of production and enlarging our rate of growth.

The long-range interest of the United States is in economic growth throughout the world. It wants the continuing prosperity of its allies in the advanced Western countries; more than that, it wants the other areas of the world to develop both agriculturally and industrially to their fullest potentiality. Measures taken by the United States in response to domestic economic situations must be looked at carefully in the light of such impediments as they may create to the progress of others.

The United States, in short, is challenged so to conduct itself as to bridge over in every possible way the potential cleavage between East and West. It is deeply concerned that East and West not draw apart through lack of understanding or through failure to see clearly the underlying interests that are held in common by the two great sectors of the globe. The way we order our life at home is an important factor in weaving the broad unity; so are our specific relations with individual countries. We can hope for bonds of friendship and ties of interest with the East; we must not let emotion or differences of ideology close the door to such possibilities of better relations with the Chinese people as may arise in years to come. Standing for freedom and for the essential dignity of man, the United States cannot see itself cut off from any continent or country.

First they say Russia and China are great and immediate threats, then they say the US must be a bridge between the East and the West and basically help China and Co. to progress and grow, so they can bring about the new world order. So why was there a Cold War in the first place? And why has the Chinese president just recently warned of a *new* Cold War? Another big fake.

Presidents **George Bush, Sr.** and Mikhail Gorbachev, 1989, building a **New World**.

The New York Times

Opinion

The New World Order That President Biden Will Inherit

The importance of vision, expertise, honesty and simple decency in the management of world affairs cannot be overstated.

Franklin Delano Roosevelt Memorial. The “writing's on the wall” ...

The director of the Rockefeller Special Studies Project was **Henry Kissinger**, one of the closest collaborators of the Rockefellers and co-founder of **Kissinger Associates**, a NYC-based international geopolitical consulting firm, founded and run by Kissinger since 1982 (it stands opposite to **BlackRock's** HQ). The company assists its clients in identifying strategic partners and investment opportunities and advising them on government relations. It is another tentacle of the octopus.

Kissinger lives in [River House](#), an extremely exclusive apartment building in Manhattan, whose notable residents are/were also Cornelius **Vanderbilt** Whitney, Peter George **Peterson** (co-founder of **Blackstone** and close collaborator of the Rockefellers; he was born **Petropoulos**, with Greek parents, which probably links them to a Greek engine and vehicle manufacturer, Petros Petropoulos A.E.B.E.), Kermit **Roosevelt** (son of the former US President Theodore Roosevelt), **Kiliaen Van Rensselaer** (from *the* Rensselaers, related to the Rockefellers and Kennedys), and Evelyn de **Rothschild** (one of the Rothschild scions; his mother is Yvonne Lydia Louise **Cahen d'Anvers** – this family is listed as a [branch](#) of the Rothschilds, but as Miles said, and I would agree, the Rothschilds are actually a branch of the Cahen/**Cohen** family). One of around 900 members of the private club in the lower levels of the building is also David **Koch** (= Cohen).

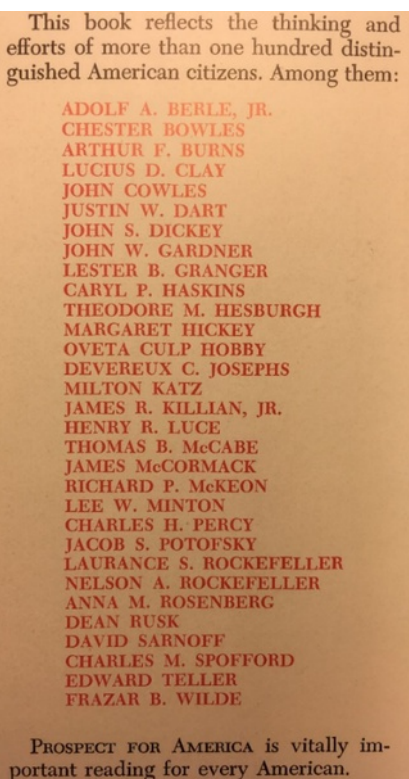

Kissinger Associates has had strategic alliances with several firms, among them **Blackstone**, and it belongs to the **US–Russia Business Council**, a trade group that includes **ExxonMobil** (= Roche), **JPMorgan Chase** (= Roche), and **Pfizer** (think about the Covid vaccine). In an [article](#) from *The New York Times* we learn that **Kissinger is an “old friend” of Vladimir Putin**. “Mr. Putin has cited Mr. Kissinger as **a trusted foreign policy adviser**. In the book 'First Person', Mr. Putin admiringly recalled a conversation in the early 1990s when, as an aide to the mayor of St. Petersburg, Mr. Putin was asked to pick up Mr. Kissinger at the airport. Mr. Kissinger made a strong impression by saying that he, too, had gotten his start in intelligence [...]”. Indeed, he supposedly served in a counter intelligence unit during WWII. Kissinger is also famous for being an attendee and former Steering Committee member of the Bilderberg Group, a discussion group “[encouraged](#)” by David Rockefeller.

But let's take a quick look at Kissinger's ancestry on his [Wiki](#) page:

Kissinger was born **Heinz** Alfred Kissinger in Fürth, Bavaria, Germany in 1923 to a German Jewish family. His father **Louis** Kissinger (1887–1982) was a schoolteacher. His mother Paula (**Stern**) Kissinger (1901–1998), from Leutershausen, was a homemaker. His brother, Walter Kissinger, was born in 1924. The surname Kissinger was adopted in 1817 by his great-great-grandfather **Meyer Löb**, after the Bavarian spa town of Bad Kissingen.

The Heinz links him to **Donald Trump**, since Trump is [related](#) to **Henry J. Heinz** of the **Heinz food company**, which has been, in point of fact, **one of the clients of Kissinger Associates**. In his paper on [Hitler](#), Miles links Trump and Heinz to Himmler and adds links to a few other families, among them also **Kaisers** and **Meyers**. Remember **David Kaiser Rockefeller** from the main part of this paper? The **Stern** links him to Howard Stern, billionaire Leonard Stern and the **Stern** banking family, which is related to the **Rothschilds**. Löb is a [variant](#) of **Loeb**, which links Kissinger to **Kuhn, Loeb & Co.** investment bank (Kuhn=Cohen). The **Meyer** links him to the **Schuylers**, who spawned also the **Tellers**, **Bushes**, **Roosevelts** and **Van Rensselaers**, among other ones. **Edward Teller**, “father of the hydrogen bomb”, was one of the people who contributed to the Rockefeller Special Studies Project. A quote from Teller's Wiki page: “Teller promoted increased defense spending to counter the perceived Soviet missile threat. He was a signatory to the 1958 report by the military sub-panel of the Rockefeller Brothers funded Special Studies Project, which called for a \$3 billion annual increase in America's military budget.” Of course they did, the magicians that they are.

This is from the internal side of the back cover:

We can see a James R. **Killian**, which probably links him to **Kiliaen** Van Rensselaer from the River House. While James **McCormack** from the list could be linked to another resident of the River House, Catherine Gerlach **Blair**, wife of William **McCormick Blair**, Jr. (both are from wealthy families; you will see the Blairs again below). I assume all those people on the list are Jewish and related to each other.

The Meyer also links Kissinger to **Mayer** Amschel **Rothschild** (founder of the dynasty according to the official story). The surname comes from the Jewish name and surname **Meir**, which is germanized as Maier, Mayer, Mayr, Meier, Meyer, Meijer, anglicized as Mayer, Meyer or Myer(s), and slavicized as Majer. This brings us to **Doris Mayer Pignatelli**, born in Slovenia (where Melania Knauss Trump comes from) to a **wealthy aristocratic German-Slovene family**, and her son, Prince **Federico Mayer Pignatelli** (a long-time friend of Donald Trump), whose father's line has close ties with the Vatican and consists of four cardinals, Pope Innocent XII etc. Federico worked also in **London and as an investment banker**, while the Pignatellis were princes of the Holy Roman Empire and dukes from the top of the nobility in **Naples**. These are obvious links to the Rothschilds, since officially one of Mayer Amschel's sons (Nathan **Mayer**) went to **London** and another (Carl **Mayer**) to **Naples**. Mind that *all* of the sons' full names consisted of the middle name Mayer, which is strange. I take this as a surname, not a second name. When Carl Mayer left Naples, he sold his **villa** to the Duke of Monteleone, Diego **Pignatelli** Aragona Cortes (yes, the Pignatellis had a Spanish branch related to Hernan Cortes, the Mexican conquistador). The Austrian branch of the Rothschilds leased huge mercury mines in Idria, Slovenia (part of the Austrian Empire back then), which means they were present in that area, so I logically assume that the Mayers from Germany and Slovenia are probably an important, unadmitted branch of the Rothschilds. Or should I rather say that the Rothschilds (from continental Europe) are a branch of the **Mayers/Meyers**? While doing a search on Federico, I stumbled upon an elite spook front charity from California called Afghanistan World Foundation. Among its board members you can find Henry Kissinger (a **Meyer**), Richard **Meier** (famous architect), Federico **Mayer** Pignatelli, and Robert Shapiro (an attorney), who reminds me on **Meyer** Schapiro, an art historian whom Miles wrote a **paper**

about. Plus, think also about the surname **May** (as in **Theresa May**, former UK Prime Minister). It is probably a short version of Mayer. In fact, **Wiki** confirms this by saying that it originates from Germany and **Scotland** (and is present also among **Russians** of German origin), with its variant forms Maye, Mayes, Mays, **Meir**, **Meier**, **Meyer**, Mayhew, **Maynard** (as in John Maynard Keynes, the famous economist), and Meynell. But there is another variant of **Mayer/Meyer**: “Other variants include May in Germany and Poland, **Major** in Turkey, both in the 16th century [...]” This takes us to **John Major**, another former UK Prime Minister, whom Miles wrote a **paper** about.

As we can see now, all those people above are related to each other, that is why they are close collaborators, such as Kissinger and the Rockefellers. And there is no Russian or Chinese threat, but only a big network of companies owned by the old merchant Families. The scenario writers are obviously copying past events. The current script seems to be a technologically enhanced copy of the period around WWII. “There cannot be peace without first a great suffering. The greater the suffering, the greater the peace,” to quote a villain from the last *Mission Impossible*.

Before I finish this chapter, I will share something I found out two months ago. I went to see on YouTube what is going on with Jordan Maxwell and I noticed someone recently published a “lost and found interview” with him from 2012. In **one** of the clips Maxwell says at the very beginning: “One of my dearest friends in this city [Los Angeles] passed away about five years ago. His name was Dr. **Harold Shire**. He lived here in Beverly Hills. He was a **chief presidential advisor to George Bush and his father**. He's on my website, if you go look at the **pictures**. George Bush's advisor and his personal attorney. And he and I and some other friends, we used to sit in Dr. Shire's office and talk about politics all night long. And this is an advisor to the President. He said **'Netanyahu and Henry Kissinger, they work for me. Kissinger Associates, that's my company'**. 'Netanyahu works for me. I put that turkey in, maybe I might take him out'. I tell you, I had some really interesting conversations with this man.”

“Jordan, Dr. Harold Shire, Todd Snyder & Mrs. Shire at dinner for Dr. Shire's birthday”

I will start with Todd **Snyder**. Although I wasn't able to find anything about this guy, there is something else that might be useful. Namely, in a recent **paper** Miles wrote that Frank Keating, former governor of Oklahoma, is also a **Kuhn/Kohen** through his 2great-grandfather Jacob **Snyder**. Which means there is a link between the Snyders and the Cohens. Keep it in mind for later, it is very important. Since the above photos were supposedly taken at Shire's birthday party, probably around the year 2000, I guess Todd is closely related to Shire, and if he comes from the Cohen-Snyders, he is definitely related to Shire's wife, as you will see below. Possibly, all the people on the two photos are closely related to each other. **Snyder** is a variant of **Schneider**, which “means **'tailor'** in German, probably a translation of the Hebrew **Hayat** [think about **Hyatt** hotels] which first appears as the term

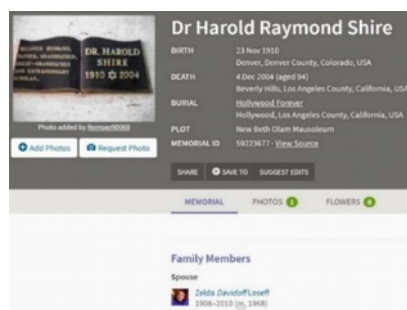

for 'tailor' in mishnaic and midrashic literature. Schneider is recorded as a Jewish family name in the 14th century. Other related family names include the Yiddish **Chaitman**, Shnaider, the Polish form Sznajder, the English **Snyder** and **Taylor**, the Russian Portnoy, Ukrainian **Kravitz** [think about **Lenny Kravitz**, the famous musician; Wiki admits his father was a Ukranian Jew], Hungarian **Szabo** [think about **Nick Szabo**, who supposedly created a precursor to Bitcoin called 'bit gold'], and Romanian Croitor(u). Schneider is recorded as a Jewish family name in the 17th century with Moses Schneider of Frankfurt am Main who visited the Leipzig fair in 1681 [another Jew from Frankfurt, one of the main banking centers of the world, you will see it again below]”.

Now Harold. This is his [obituary](#) in *LA Times* from December 8, 2004:

Shire, Dr. Harold (1910–2004)

A Renaissance Man. Scholar and [Inventor](#), he was Assistant District Attorney of Los Angeles and Assistant United States Attorney of Southern California. A WWII Army officer in Europe and after the war he practiced law. After a life long interest in aviation he invented the flexible connectors used in jet planes and was founder and president of General Connectors Corp. in Burbank, CA. Upon retirement he earned a Ph.D. in Human Behavior and became a University Professor, Mason and Shriner.

At a first glance, I see no special ties to New York or Kissinger in general. His bio doesn't look like a bio of a handler, so it may be a lie, unless those were covers. But we do find a link between the [Shiers](#) and New York, since some of them are supposedly “the descendents of Hans **Adam** Schrier/Shrier/Scheier/Shier who left the Palatinate region of **Germany** in 1709 eventually arriving in Limerick County, Ireland. Several descendents subsequently moved to **New York State**, United States of America and Ontario, Canada and then migrated to all areas of North America”. Thepeerage.com isn't helpful, since there are almost no hits with any of those variants (and only 1 Shire). [House of Names](#) also says they came from Normandy to England and then to Ireland. In another video (not available anymore, but I always make sure to write it down) Maxwell describes Harold (without naming him) “a very powerful **Jewish** man”. We can confirm this with Harold's tombstone photo in his profile at [Find a Grave](#).

This is all we get about him, and it is probably all we need. We can see the Star of **David** on his tombstone (proving that he was Jewish), we can see Beverly Hills (one of the wealthiest and most exclusive places on the planet), and among his family members there is only his wife Zelda **Davidoff Loseff**.

Zelda "Zel" Davidoff Loseff

BIRTH 9 Aug 1908
Milwaukee, Milwaukee County, Wisconsin, USA

DEATH 7 May 2010 (aged 101)
Woodland Hills, Los Angeles County, California, USA

BURIAL Hillside Memorial Park
Culver City, Los Angeles County, California, USA

PLOT Hillside Slope, Block 6, Plot 166, Space 3

If you do a general search on Davidoff, you get [Zino Davidoff](#), the founder of *Davidoff*, a Swiss premium brand of cigars, cigarettes and smoker's accessories, plus other luxury things, such as watches etc. This **Jewish** man was born in Kiev, Ukraine (at the time of the Russian Empire) as Sussele-**Meier Davidoff**. He was known as the "King of Cigars". According to *LA Times*, "one of the first customers at the family's new shop in Geneva was **Vladimir Lenin**, who spent seven years in Switzerland before returning to Russia in 1917 to lead the Communist revolution". Really? It reminds me on Mussolini's stay in Switzerland. Looks like Switzerland is a kind of a **Camp X** for fake elite socialists. Anyway, the Davidoff surname can be spelled also as Davidov, Davydov, and Davidow, and it is common among Russian Jews, since it comes from the Davidic line. Although you find a lot of people on Wiki with all those variants combined, none of the pages includes an entry of the **Orlov-Davydov** family (also spelled Orloff-Davidoff, Orlow-Davidow), which takes us to the **top of the Russian nobility**. There are the [House of Orlov](#), [House of Orlov-Denisov](#), [House of Orlov-Davydov](#), and the [House of Davydov](#). The **Orlovs** "produced several distinguished statesmen, scientists, diplomats, and soldiers. The family first gained distinction in the 18th century through the achievements of five Orlov brothers [sounds like the cover story about the five sons of Mayer Rothschild], of whom the second eldest was **Catherine the Great's paramour** [lover], and two younger brothers were **notable military commanders**". [Grigory Orlov](#) "led the coup which overthrew Catherine's husband Peter III of Russia, and installed Catherine as empress". Her father was a German prince of the [House of Ascania](#), which takes us back to Ascanius, founder of Rome, and the [Phoenicians](#). If you read the entire Wiki page on the Orlovs, you will see that they were very influential and rich, sort of the Stanleys in England. Prince Vladimir Nikolayevich Orlov was a **close advisor to Tsar Nicholas II**.

The first is a photo from Nicholas's [Wiki](#) page:

The caption says: “Emperor Nicholas II of Russia with his **physically similar cousin, King George V of the United Kingdom** (right), wearing **German military uniforms** in Berlin before the war; 1913”. Nicholas, George, and **Medvedev** look as three peas in a pod, don't they? Especially King George and Medvedev. Medvedev is very short (5 ft 3 or 163 cm even with [platform boots](#); and Putin seems to be even shorter than Medvedev when they are together), which is not uncommon among aristocrats (think also about Mussolini and Italy's King Victor Emmanuel III, who was only 5 ft tall). Both Putin and Medvedev were born in **Saint Petersburg** (aka **Leningrad**), and the Orlovs had two huge and important palaces there – the [Marble Palace](#) and the [Gatchina Palace](#), one of the favourite residences of the Russian imperial family, and during the 19th century an important site of Russian politics. I assume that King George, Emperor Nicholas, Medvedev and Putin are all related to each other.

I wasn't able to find out where these Orlovs actually come from, but I did dig up something interesting about their surname. It [comes](#) from the name 'eagle', but it is also used by **Jews**. A variant of Orlov is [Orel](#) (literally 'eagle'): “Jewish (eastern Ashkenazic): patronymic from the Yiddish personal name *Orl*, taken as a **pet form of Aaron**.” This is probably where the name of the City of [Orlando](#), Florida originates from. Wiki lists a few stories, but they don't know how it actually got that name. What they do know is that “prior to being known by its current name, Orlando was once known as Jernigan. This name originates from the first European permanent settlers, **Isaac** and **Aaron** Jernigan, cattlemen who moved from the state of Georgia [...]”. [Aaron David Jernigan](#) “was a successful tradesman and merchant. He was also a captain of the local militia [...] He died in 1891, and was buried at Lake Hill Cemetery in Orlo Vista”. The [Orlo Vista](#) community is also spelled **Orlovista**. The Jernigans were obvious Jews. Anyway, Aaron here refers to the biblical Aaron, and “a [kohen](#) (also spelled **cohen** or kohan) is a descendant of the sons of Aaron who served as priests in the Temple in Jerusalem”. So in case of Orlovs, we end up with the **Cohens**.

This is what the *Museum of the Jewish People* tells us about the surname [Orloff](#): “Orloff, in which the suffix '-off', a Westernized spelling variant of the standard Russian suffix '-ov', means 'of/from' and can stand for 'son of', is a form of Orfans, a variant of Orlov, based on the Slavic Oryol, which means 'eagle'. The German equivalent is **Adler**, the German for 'eagle'. The eagle became popular as a house sign and a family name. Some Adler families have derived their name from two houses in the **Judengasse of Frankfurt am Main (Germany)** [Mayer Amschel Rothschild, the supposed founder of the dynasty, lived there], which had the sign of the eagle (no. 27 was at the sign of the black eagle, and no. 86 was at the sign of the golden eagle). **Other Adlers and Orlovs, who are **Cohanim**** ('priests'),

selected this name as a symbol of the outstretched arms of the priest as he recites his blessing, just as the eagle spreads his wings.” Hmm, Adler, you say. This takes us back to the paper on [Anne Frank](#), who's ancestry brings most of the surnames you have seen so far in this paper: **Stern**, **Löb**, **Mayer** (the first three link her to Kissinger, which means that Kissinger is linked also to the ones that follow), **Cahen** (=Cohen), **Ha-Kohen** (=Cohen), **Koch** (=Cohen), **Marx**, **Schwarzschild**, **Schwarz**, **Rothschild**, **Elkan** (see [John Elkann](#), scion of the Agnelli family, co-owners of *The Economist* together with the **Rothschilds**), **Keller** (see [Count Vladimir Petrovich Orloff-Davidoff](#), who married Princess Olga Ivanovna Bariatinskaya, daughter of Ivan Ivanovich Bariatinsky, Prince Bariatinsky and Maria Wilhelmina **von Keller**; see also Petr **Kellner**, a Czech billionaire who recently supposedly died in a helicopter crash – some outlets at first [mispronounced](#) his surname as **Keller**, which is in fact a variant of **Kellner**, and is also [Jewish](#)) and **Adler**. She was also a **Haas**, which links her to **Herta Haas**, a lover of Josip Broz Tito, president of former Yugoslavia. Herta was a wealthy Jewess, and a Jewish 33° Freemason from Slovenia [wrote](#) that Tito has two biographies – a public one and a secret one. According to the secret one, his father was supposed to be Samuel **Mayer** (remember Doris Mayer Pignatelli from Slovenia? Tito's mother was officially Slovenian). But this guy would require a separate paper, so I will leave it at that.

The [coat of arms](#) of the Orlovs features 3 Stars of David, which is another indication of their Jewishness. Notice also the phoenix, as a stylized eagle:

Among the noble families of Russia, Wiki lists also the [House of Meyer](#), which brings us back to Zino **Meier** Davidoff from above. As said, one of the first customers at his family's new shop in Geneva was supposedly **Vladimir Lenin**. Miles wrote in his [paper](#) on Lenin that this was an alias, not a real surname. There are various theories floating around trying to explain the choice of his fake surname, but I will provide a more plausible one.

If you visit Wiki's page on the [House of Romanov](#), you will see that one of the disputed current heads of the dynasty is Prince Karl Emich of **Leiningen**. Try to respell that: **Leiningen**. If you think this is a stretch, let me remind you that Kissinger's surname, as you saw above, was adapted from the name of the town Bad Kissingen, so I can logically assume that Lenin was adapted from [Leiningen](#). This takes us back to **Lenin**, aka **Saint Petersburg**, the **Orlovs**, **Catherine the Great**, **Medvedev**, and **Putin**. The [House of Leiningen](#) is an old German noble family related to the British royal family. As we can see, a Romanov replaced the Romanovs, and the Russian royalty continued to rule up to this day through Medvedev (and I assume Putin as well). This is why Kissinger and Putin are old friends. Not just because of Harold Shire's connection, but because they are probably related (through the Meyers?). Kissinger was born in Germany, and the Russian royal family is also of German descent. Among the members of the Romanovs' [cadet branches](#) you can find also Prince Nikolai **Orlov** (1896–1961) and Elikonida Silvia **Trumpp** (b. 1968), who married Prince George Alexandrovich Yurievsky in 2013. He is a descendant of Emperor Alexander II. They were [married](#) in Switzerland (where George

was born) and you can find them also on theeperage.com. **Switzerland links back to Lenin, since he spent a few years there before returning to Russia to lead the fake revolution, as you saw above.** So Zelda's Russian-born father's line eventually took us to the Cohens. Her Russian-born mother was Ida **Polland**, and her matrilineal grandparents were Peter Polland and Flora **Rice** Polland (all Jewish). Her first husband (also a Jew) **Samuel Alvin Loseff** brings us back to the Cohens, since his father was Isadore **Cohen** and his mother **Esther Loseff Cohen**. Esther's mother was Russian-born Ida **Workenoff** Loseff. Esther's sister was **Dora Loseff Steinberg**. A Cheryl **Kahn** (=Cohen) **Hyatt** (think about the Hyatt hotel chain, it is a **Jewish surname**) made a dedication to her on her website at Findagrave. By the way, the co-founder of the Hyatt hotels, Jay Pritzker (from the **Pritzker** billionaires), had a father Abram, whose mother was née **Cohn** (=Cohen), while the wife of the first of the Pritzker dynasty was a **Schwarzman**. Which takes us back to the **Snyder/Hayat-Cohens** from above.

To sum up, there is no shift in global power, and no Russian or Chinese threat. There is only one interconnected global business network of old upper-class families stealing together from the lower classes and at the same time competing among themselves.

Jeremy Rifkin & Robert Lawrence Kuhn

These Jewish guys are just more proof the world is run by the same merchant elite. Here is where climate change kicks in. We have seen and intuited from the very beginning of Covid that the climate change bandwagon will speed up. That is why actress Greta Thunberg (TIME's person of the year 2019) was called in to assist just before Covid happened, later saying that climate change is as urgent as the coronavirus. Another actor is Jeremy **Rifkin** (a Slavic/Russian variant of **Rivkin** and **Rifkind**).

His book *The Green New Deal* was published in September **2019**:

An urgent plan to confront **climate change**, transform the American economy, and create a **green post-fossil fuel culture**.

While the Green New Deal has become a lightning rod in the political sphere, there is a **parallel movement emerging within the business community that will shake the very foundation of the global economy in coming years**.

He has been an **advisor to both EU and China** on the third industrial revolution. He wrote an essay titled *A Smart Green Third Industrial Revolution 2015–2020* for the EU, and his preachings seem to be part of the first *Strategic Foresight Report* (Sept 2020) of the European Commission, while the Chinese placed the ideas from his book *The Third Industrial Revolution* at the core of their 13th five-year plan (2016–2020).

Forbes, October 2019

The Green New Deal: Jeremy Rifkin and the **Coming Collapse**

A seismic shift is under way. According to author and futurist, Jeremy Rifkin (*The Third Industrial Revolution*, *The Zero Marginal Cost Society*), **we are in the final phases of the fossil fuel era.** In his new book, *The Green New Deal*, Rifkin argues that **we are entering a zero carbon economy.** Much as coal and steam powered the First Industrial Revolution [19th c.], and oil and telephony powered the Second Industrial Revolution [20th c.], so clean energy and digital technologies are now converging toward what he describes as the Third Industrial Revolution [21th c.]. [One per century.]

This next phase of infrastructure modernization is rooted in the convergence of **5G communications**, a renewable energy Internet (clean technologies and smart grids), and a digitized mobility and logistics platform (autonomous electric vehicles, artificial intelligence, and the Internet-of-Things).

Rifkin would know something about this. **He is a principal architect of the European Union's long-term economic vision, Smart Europe, and a key advisor to China's Third Industrial Revolution vision.** [So much about the fake competition between the West and the East.]

His new book, *The Green New Deal*, is essentially an attempt to rouse the United States from its' slumber within a collapsing 20th century fossil fuel era. **Akin to the New Deal of the 1930s, the Green New Deal is envisioned as a long term proposal for remaking America's energy infrastructure.** Building on current discussions in the US Congress, this includes upgrading America's energy grid, transforming its' buildings, and transportation infrastructure, and **creating a massive green collar workforce.**

In Rifkin's view, **the key to financing this transition is the pension fund industry.** **Now the largest pool of capital in the world,** global pension funds represent \$40 trillion in investments, including \$25.4 trillion in the United States alone.

The bigger the number of premature deaths of older generations, especially our grandparents, because of the Covid panic, depression, anxiety, vaccines and fascist, unlawful, inhumane measures taken in the nursing homes and hospitals, the more money for the "transition". Or should I say, the more money for the privately owned companies providing products paid through the investments made via pension funds for the fake transition. Why fake? Because electric cars, for one thing, were invented and used already in the 19th century. So now, more than hundred years later, they are "saving" the environment with something that could have been used on a larger scale long ago. **Another mass murder, fake revolution, and theft by the same families.**

In fact, the mainstream has admitted this: [UK] ***Government saves £600m on state pension payments as Covid deaths surge: The Government will save over £600m in state pension payments this year following a steep rise in excess deaths among the elderly, according to the budget watchdog.*** Plus, [UK] ***Govt urged to consider using pension obligations to power push to net zero: A new white paper has proposed that the government reallocates some unfunded state and defined benefit pension obligations to fund debt and build low-carbon infrastructure.***

A [Times](#) article from 5 Mar 2020 is more proof of this:

Coronavirus can trigger a new industrial revolution

The disease could be the **shock** we need to **harness new technology** and **new ways of working**

Don't take this the wrong way but if you were a young, hardline environmentalist looking for the **ultimate weapon against climate change, you could hardly design anything better than coronavirus.**

Unlike most other such diseases, it kills mostly the old who, let's face it, are more likely to be climate sceptics. It spares the young. Most of all, it stymies the forces that have been generating greenhouse gases for decades. Deadly enough to terrify; containable enough that aggressive quarantine measures can prevent it from spreading. **The rational response for any country determined to prevent loss of life is to follow China's lead and lock down their economy to stem its spread.**

A classical example of fascist propaganda from the very beginning of the Covid hoax. What they are doing with the elderly during Covid is simply a *senicide* – killing of the elderly, or their abandonment to death –, purely for profit and population control.

Back to the *Forbes* article:

But is there time? **According to the Intergovernmental Panel on Climate Change (IPCC), we have little more than 12 years to cut the emission of global warming gases by 45%.** The truth is that without a **fairly radical change** in direction, our imploding fossil-fuel civilization will bring the Earth's ecosystems down around us.

The good news is that one major economy has begun driving clean energy technologies. Where the British led the First Industrial Revolution, and the United States led the Second Industrial Revolution, it would seem that **China is now poised to lead the Third Industrial Revolution.**

At the same time, **China currently remains the world's largest carbon polluter.**

Notwithstanding China's capacity for carbon pollution, however, **Beijing is clearly pivoting to clean energy.**

But **China remains the largest investor in renewable energy** – making up nearly one third of the world's total. Notwithstanding the fact that **renewables represent a relatively small proportion of global power generation, the accelerating growth of clean tech innovation is set to redraw the geopolitical map of the 21st century.**

The [Office of Jeremy Rifkin](#) is located in **Bethesda** (a suburb of Washington, D.C.), a few minute drive away from the [US Intelligence Community Campus](#), which is under the auspices of the Office of the Director of National Intelligence in charge of the National Intelligence Council. The campus was renovated with the goal to increase collaboration between the Community's agencies and [provides](#) “a centralised hub for knowledge sharing among the agencies housed there”. So this is probably one of the main sites where projects like Covid are planned and coordinated between various Intel agencies.

Another American Jew behind the Chinese government is Robert **Lawrence Kuhn**.

Lawrence could link him to Lawrence Wilkinson, a co-founder of Global Business Network, while **Kuhn** is a variant of **Cohen** (a “branch” of the **Rothschilds**), and Robert is probably related to the founders of the **investment bank Kuhn, Loeb & Co.** (Kissinger is a **Löb**, remember? it is a variant of Loeb) and through them to Moses **Shiff**, a broker of the **Rothschilds** in Frankfurt. **Kuhn, Loeb & Co.** “also acted as the **leading investment house for John D. Rockefeller**, through the guidance of his **investment adviser, Frederick T. Gates** [...] Overseas ventures that Rockefeller also got involved with included the **bank's loans to the Chinese and Imperial Japanese governments.**” Among the general partners of the bank you can find also a **Stewart**, a **Hall**, and a **Schwartz**.

From [Wiki](#):

Robert Lawrence Kuhn is a public intellectual, international corporate strategist and **investment banker**.

Kuhn was awarded the China Reform Friendship Medal by President Xi Jinping and Chinese leaders at the celebration of the 40th anniversary of China’s reform and opening up (December 18, 2018). The medal, China’s highest award, honors 10 foreigners who facilitated China’s reform and opening up over the four decades. For 30 years, Kuhn, with his long-time partner Adam Zhu, has worked with China’s state leaders and advised the Chinese government.

In 1989, he was invited to China by the director of the State Science and Technology Commission, Song Jian, whom Kuhn considers his mentor. Since then he has worked with China's senior leaders and advised the Chinese government on international, policy and business matters.

Kuhn advises and works with China leaders on special projects.

Kuhn advises multinational companies and executives on China strategies in a variety of sectors, including science and technology, information technology, energy and resources, industrial, media and entertainment, healthcare and medical and pharmaceuticals, consumer products, and financial services. He works with major Chinese companies on capital markets and mergers and acquisitions.

He was president and co-owner [1991–2001] of The Geneva Companies, then the largest mergers and acquisitions firm in the U.S., representing middle-market companies (sold to Citigroup in 2000).

He is one of the *China Visionaries* in the TV series produced for China's 60th anniversary by Shanghai Media Group (one of two Americans, along with Henry Kissinger) [...]

Kuhn was selected by Oriental Outlook magazine (published by Xinhua News Agency) as **one of the all-time top-ten influential supporters of China's ruling party/CPC (the only one living)**.

Kuhn is chairman of the **Kuhn Foundation, which disseminates understanding in science and philosophy, supports cultural endeavors and promotes good relations between America and China.**

Plus:

Kuhn is a partner in the China operations of IMG, the sports, entertainment, and media company which is owned by Forstmann Little and run by the legendary investor Ted Forstmann. In particular, Kuhn, working with Forstmann, structured a ground-breaking joint venture CCTV-IMG Sports Management Company to create, develop and promote world-class sporting events and sports programming across China, including Taiwan, Hong Kong and Macau. The joint venture has a 20-year term, is exclusive to IMG and CCTV [China Central Television], and intends to bring the best of world sports to China and take the best of China's sports to the world. The historic partnership will own and produce a series of live sporting events and television/multimedia programming that will serve as a completely new platform for the sports industry in China following the Beijing 2008 Olympic Games.

Good, more brainwashing for Chinese people by the “Western” elite. Kuhn is [also](#) the creator, writer and host of the public television series *Closer to Truth*, which presents scientists and philosophers discussing fundamental issues (cosmos, consciousness, philosophy/religion).

Miles mentioned him in his paper *The Matrix Deconstructed*:

This psy-op has been accelerating in the past few years. In 2008, it went into overdrive, as you can see by this story from August 2015 at Space.com. It is called “Is Our Universe a Fake?” and is by Robert Lawrence Kuhn. He is the one who hosts the *Closer to Truth* series on PBS, now in its 15th season. In 2008, the third leg of the series began, called *Cosmos. Consciousness. Meaning (God)*. This nauseating series shows just how far “science” has fallen in the past half century. Kuhn isn't even a scientist. He is an investment banker and corporate strategist. His bio is beyond spooky. For instance, this guy now hosting a science show on PBS got his start in 1972 coordinating a “theology project” for the Worldwide Church of God. I am not making this up. It comes straight from his mainstream bio. **He has “CIA front” written all over him.** Here is a list of “intellectuals” who have appeared on this program, so you can add them all to your spook list [...] All those hired phonies are leading you *Further Away from the Truth*.

You want to bet where the [company](#) that [produces *Closer to Truth*](#) is located? Yup, **Bethesda**, a 14-minute drive away from the Intelligence Community Campus.

I think the cases on China and Russia are closed.

“Spanish” Flu

Remember the *NIC 2020 Project* report? It was published in **2004**. A year later, the Bush administration [took action](#):

In the summer of **2005**, President George W. Bush was on vacation at his ranch in Crawford, Texas, when he began flipping through an advance reading copy of **a new book about the 1918 flu pandemic**. He couldn't put it down.

When he returned to Washington, he called his top homeland security adviser into the Oval Office and gave her the galley of historian **John M. Barry's "The Great Influenza,"** which told the chilling **tale** of the **mysterious plague** that "would kill more people than the outbreak of any other disease in human history." [Don't forget that Trump called Covid "China plague".]

The word "mysterious" tells me it was probably another manufactured, inflated, fake event – or maybe I should use the word *tale*. Barry is a **football-coach-turned-author**, expert on pandemic preparedness, advisor to Bush, Obama and **WHO**. His true profession: freelance spook. So he was just instructed to front this book, which was published in **2004**, the same year as this NIC report.

"You've got to read this," Fran Townsend remembers the president telling her. "He said, 'Look, **this happens every 100 years**. We need a national strategy.'"

So Dumbya was on a vacation, flipping through a book written by a former football coach, and the book said that such events occur every 100 years, and here we are, exactly 100 years later, another "killer" pandemic. How pathetic, I mean prophetic.

It is also just a mere coincidence that the **upper class** is cashing in on medical equipment again:

The [Anti-Mask] League "seems to have been an ad hoc thing that was set up to respond to the board of supervisors reinstituting the mandate that citizens wear masks", says Brian Dolan, a professor at the University of California San Francisco school of medicine. **Local denim manufacturer Levi Strauss was a major producer of masks, Dolan adds, lending credence to the suspicion that profit was the real motive. The medical literature was scant, with a Canadian health official casting doubt on masks' effectiveness as well.**

So this SARS/Covid thing is just a scam replicated a hundred years down the road. Even Barry himself **admits** this:

There's little trace of the 1918 flu pandemic in the culture at large. Why do you think that is? [...]

I've never been able to come up with a good explanation as to why there's so little written about the 1918 pandemic. There was quite a bit of pulp fiction written in the 1920s. I didn't know that myself until somebody else who was interviewing me said they collected it. **But not serious fiction. There were only a tiny handful [of writers who addressed it],** such as William **Maxwell** and Katherine Anne Porter. John Dos Passos is one of my favorite writers. He got influenza on a troop ship, one of the worst places to get it, **and he wrote about two lines in his entire body of work.**

When I first started researching this book, which was quite a while ago now, I had an aunt who was then in her 90s. And when I mentioned it to her, she grabbed her chest and said, "Oh! It was the only time I saw my father cry." It certainly was burned into her consciousness. And whenever I mentioned it to somebody old enough to have lived through it, I got a similar response. They certainly didn't forget it, **but why it didn't register in our literature to a greater degree, I don't know.** I mean, it was brief – you're talking about a

period of weeks. **It also occurred simultaneously with the war. But I have no good explanation.**

Chilling tale, pulp fiction, serious fiction, grabbed her chest ... The world is a stage, as Shakespeare would say. I haven't spent time analyzing the 1918 flu, but from what I see here, it sounds like a fictitious scenario created to distract from WW1 and related (banking) things and to make profit at the same time. Not to mention the **fact** that we actually don't know where the “Spanish” Flu originated at all:

As the pandemic reached epic proportions in the fall of 1918, it became commonly known as the “Spanish Flu” or the “Spanish Lady” in the United States and Europe. **Many assumed this was because the sickness had originated on the Iberian Peninsula, but the nickname was actually the result of a widespread misunderstanding.**

Since nations undergoing a media blackout could only read in depth accounts from Spanish news sources, they naturally assumed that the country was the pandemic’s ground zero. The Spanish, meanwhile, believed the virus had spread to them from France, so they took to calling it the “French Flu.”

While it’s unlikely that the “Spanish Flu” originated in Spain, scientists are still unsure of its source. [...] Researchers have also conducted extensive studies on the remains of victims of the pandemic, **but they have yet to discover why the strain that ravaged the world in 1918 was so lethal.**

Another *mystery*, huh? The fake Great Influenza served as a distraction from the manufactured Great War (and the creation of the FED). Just like the 2009 pandemic was a distraction from the 2008 global financial theft, and Covid-19 a distraction from the 2020 global financial theft and other shenanigans. These guys are using the same tactics, methods, and strategies over and over again, quietly taking our money and freedoms. The bigger the theft, the bigger the fake event fronting it and other lesser ones surrounding it. We are supposedly in the middle of a health and job crisis, *but governments around the world are spending money for military like crazy*. Is there another major psyop on the horizon? I guess so.

Let's continue with the article on Bush:

Thus was born the nation's most comprehensive pandemic plan – a playbook that included diagrams for a **global** early warning system, funding to develop **new, rapid vaccine technology**, and a robust national stockpile of critical supplies, such as **face masks and ventilators**, Townsend said.

The effort was intense over the ensuing three years, including **exercises** where cabinet officials gamed out their responses, but it was not sustained. Large swaths of the ambitious plan were either not fully realized or entirely shelved as other priorities and crises took hold.

But elements of that effort have formed the foundation for the national response to the coronavirus pandemic underway right now.

When Bush first told his aides he wanted to focus on the potential of a global pandemic, many of them harbored doubts.

“My reaction was – I'm buried. I'm dealing with counterterrorism. Hurricane season. Wildfires. I'm like, 'What?'" Townsend said. **“He said to me, 'It may not happen on our watch, but the nation needs the plan.'”**

Over the ensuing months, cabinet officials got behind the idea. **Most of them had governed through the Sept. 11 terror attacks, so events considered unlikely but highly-impactful**

had a certain resonance.

According to Bossert, who is now an ABC News contributor, **Bush did not just insist on preparation for a pandemic. He was obsessed with it.**

“He was completely taken by **the reality that was going to happen,**” Bossert said.

In a November 2005 speech at the National Institutes of Health, **Bush laid out proposals in granular detail – describing with stunning prescience how a pandemic in the United States would unfold.**

There you have it, he described it with “stunning prescience” how the pandemic would unfold. Prescience means *foreknowledge*.

Among those in the audience was **Dr. Anthony Fauci**, the leader of the current crisis response, **who was then and still is now** the director of the National Institute of Allergy and Infectious Diseases.

The president recognized that **an outbreak was a different kind of disaster** than the ones the federal government had been designed to address.

“In a pandemic, **everything from syringes to hospital beds, respirators masks and protective equipment would be in short supply.**”

Bush told the gathered scientists that **they would need to develop a vaccine in record time.**

“If a pandemic strikes, our country must have a surge capacity in place that will allow us **to bring a new vaccine on line quickly and manufacture enough to immunize every American** against the pandemic strain,” he said.

Bush set out to spend **\$7 billion building out his plan. His cabinet secretaries urged their staffs to take preparations seriously.**

An obvious steal.

The Rockefellers

Since the Rockefellers knew what was coming, they made appropriate recommendations as to what has to be done in 2020 to get the economy back on track after the first lockdown in spring. So in April 2020, they published the paper *National Covid-19 Testing Action Plan: Pragmatic Steps to Reopen Our Workplaces and Our Communities*.

Testing is our way out of this crisis. Instead of ricocheting between an unsustainable shutdown and a dangerous, uncertain return to normalcy, the United States must mount a sustainable strategy with better tests and contact tracing, and stay the course for as long as it takes to develop a vaccine or cure [...]

The Rockefeller Foundation exists to meet moments like this. In the past two weeks we have brought together experts and leaders from science, industry, academia, public policy, and government – across sectors and political ideologies – to create a clear, pragmatic, data-driven, actionable plan to beat back Covid-19 and get Americans back to work more safely.

Our National Covid-19 Testing Action Plan lays out the precise steps necessary to enact **robust testing, tracing, and coordination** to more safely reopen our economy – **starting with a dramatic expansion of testing** from 1 million tests per week to initially 3 million per week and then 30 million per week [...]

Testing has been promoted since the very beginning by the WHO: “We have a simple message to all countries – **test, test, test** [...] All countries should be able to test all suspected cases, they cannot fight this pandemic blindfolded.” In fall 2020, mass testing has started to be done by countries all over the world. But, as you know by now, those tests should have never been used for this purpose in the first place, and the authorities know this well.

The goal of the Action Plan is to build a state-led national program of Covid-19 testing that supports reopening the economy through the goals of **workforce monitoring, early detection of recurrent outbreaks, and diagnostic and home testing**. This would be the largest public health testing program in American history.

The action plan has three major objectives: 1. Launch 1-3-30 Plan to Dramatically Expand Covid-19 Testing, 2. Launch a Covid Community Healthcare Corps for testing and contact tracing, 3. Create a Covid-19 **Data Commons** and **Digital Platform**

Coordination of such a massive program should be treated as a wartime effort, with a **public/private bipartisan Pandemic Testing Board** established to assist and serve as a bridge between local, state, and federal officials with the logistical, investment and political challenges this operation will inevitably face.

The Covid-19 pandemic caught the United States unprepared, with inadequate emergency stockpiles of protective equipment, ventilators and vital medicines.

By what we learned so far in this paper, the US certainly was *not* unprepared.

The century-long interval since a viral respiratory pandemic circled the globe with just the right mix of lethality and infectiousness may have led many to stop believing in the inevitability of such a **plague**.

Another reference to the Great Influenza fake, making sure they don't miss the opportunity to mention it. But they also use the word ‘plague’, which has been used frequently in the media in relation to Covid, together with ‘killer’ (virus) and ‘mysterious’ (disease). So much about the “media-generated *fear factor*”, which was **the case** with SARS.

Indeed, what is sometimes lost in the debate between “saving lives” and “saving jobs” is that **shutdowns increase alcoholism, depression, domestic abuse and a host of other social woes that together contribute to higher mortality – particularly among the poor**. After the market crash of 2008, the United States saw a measurable **decline in life expectancy**. **Depending on the severity and length of the shut-down, we run the risk of losing more lives from the economic downturn than from Covid-19**.

Something has to change and fast. But how?

Yes, but why were lockdowns implemented *in the first place*? **Because of testing itself**. If there was no testing, there would be no pandemic. They are talking about consequences that they knew would happen, since they planned it that way.

Routine **Covid-19 diagnostic tests** – amplifications of nucleic acid sequences that are signatures of the virus – **offer the best chance short of a vaccine to provide that kind of reassurance**.

The Rockefeller Foundation and its finance partners will help create an emergency procurement network, the Emergency Network for Covid-19 Testing [...]

They push Gates on the front line, but we can see how these events are being orchestrated by old institutions in the background. One of the experts that assisted with this Rockefeller Covid testing plan [said](#) in May 2020 that “[s]pending, say, **\$250 billion for testing** is a small amount compared with the trillions of dollars the economy is losing during the pandemic [...] While trillions of dollars have been allocated toward stimulus, small-business loans and other assistance to ease the pandemic’s economic impact, only **\$33 billion** has been allocated to Covid-19 testing”. That is a lot of stolen money, and waste of natural resources.

South Korea successfully used aggressive contact tracing [...] But the United States has had only limited contact tracing [...] There are also **heightened concerns about the privacy and the liberty of the infected and their contacts in the U.S.**

Some privacy concerns must be set aside for an infectious agent as virulent as Covid-19, **allowing the infection status of most Americans to be accessed and validated in a few required settings and many voluntary ones** [...] But vaccine development and manufacture could take years, and when it comes certain populations may be excluded from receiving it for health reasons. **In the meantime, infection status must be known for people to participate in many societal functions.**

Those screened must be given a unique patient identification number that would link to information about a patient’s viral, antibody and eventually vaccine status under a system that could easily handshake with other systems to speed the return of normal societal functions. **Schools could link this to attendance lists, large office buildings to employee ID cards, TSA to passenger lists and concert and sports venues to ticket purchasers.**

Not surprisingly, Tony **Blair** has been [promoting](#) a ‘digital health passport’ since June last year:

A digital health passport with a traffic lights-like system that shows vaccine status of individuals is needed to ensure that **those with negative Covid-19 test and vaccination** are exempt from curbs and are able to attend **sport events, concerts** and **travel**, a think-tank set up by former British prime minister Tony Blair said on Thursday.

It called on the Boris Johnson administration to urgently approve a digital platform for the health passport that can draw on vaccine and testing data by the second quarter of 2021, so that the economy, travel and society can be reopened and future lockdowns avoided.

The think-tank’s report, titled *How the Government Should Call the Shots: Getting the UK Vaccine-Ready*, said the passport should show an individual’s **next testing date, current testing status (antigen and antibody), vaccine date and location, and vaccine status including expiry date.**

It said, “The digital health passport would mean that **those with an up-to-date negative Covid-19 test or a vaccination** would not be subject to strict Covid restrictions and would be able to

access settings such as the **workplace**, **hospitality venues**, sporting events, concerts.”

Sounds like Tony is in league with the Rockefellers. He also **said**:

“I know all the objections [to 'health passports'], but it will happen. It’s the only way the world will function and for lockdowns to no longer be the sole course of action” [...]

A few such ‘health passports’ already **exist**:

But no Covid-19 health pass has received as much fanfare as the **CommonPass app**, developed by the Commons Project, a nonprofit focused on building technology for public use. The group began developing software to help people retrieve and use their medical data **well before the start of the pandemic**. But spikes in virus cases around the world this spring accelerated its work.

First, the group helped build a health pass app for some East African nations [...] A few months later, the group partnered with the **World Economic Forum** to build a more global digital health pass system for Covid-19. Their first target: international air travel.

You can only guess once who funded **CommonPass**:

The CommonPass system, backed by the World Economic Forum (WEF), is designed to create a common international standard for passengers to demonstrate they do not have coronavirus.

Paul Meyer, the CEO at the **Commons Project, which was given startup funding by the Rockefeller Foundation two years ago** [2018] and created the digital health pass, said countries that have closed borders and imposed quarantines are looking for ways to “thoughtfully reopen” their borders.

Well well, look at that. The Rockefellers created this ‘common international standard’ app well before the pandemic (and a Meyer is the CEO). No wonder they were able to write up that Covid Testing Plan in two weeks and publish it right after the Covid-mania had started in Europe. Is it a coincidence that Italy’s historical financial center (Lombardy) was hit first and most, and that the Rockefeller Foundation’s local presence is marked by the **Bellaggio Center** at Lake Como (Lombardy)? You can bet that their ancestry comes from there, too.

One of the reasons why they want to restrict air travel might be to push us to use the road and railway more, but not the old way. Remember, it is the new abnormal now, so no more petrol cars, but electric ones, or at least hybrids. We will probably be forced to buy one until 2030. That’s why the gasoline prices are going up (especially after a new fake event or “shock”). It will probably become more and more expensive to own a car run on petrol/diesel in the future.

Plus, the Rockefeller Foundation is also one of the founding partners of the **ID2020** project that promotes the need for digital IDs. Another one is **Gavi, the Vaccine Alliance**, founded in the year **2000** by the **Gates Foundation**, “a key Gavi partner in **vaccine market shaping**”. Gavi wants to create a **digital ID** to be able to store a child’s medical history. But this could apply also to Covid vaccines, right? That’s why Blair and Co. are pushing for a health passport, undermining our freedom. If you want to know more about this, you can watch the documentary *Who is Bill Gates* (yes, Corbett is controlled opposition, but the documentary is good enough; although he didn't mention Gates's funding of Moderna).

Another founding partner is **Accenture**. This spook company is also involved with the [financial reset](#) mentioned in the chapter New Financial Order:

Last week it was announced by the Bank of England that they had appointed Accenture, a professional services company, as their ‘Technology Delivery Partner’ for the renewal of the UK’s Real Time Gross Settlement (RTGS) payment system. The news was in keeping with the BOE’s timeline of deciding upon a tech partner by the summer of 2020.

Before looking at the wider implications of Accenture’s partnership with the bank, it is worthwhile noting a couple of things about the company.

First, aside from their new found relationship with the BOE, **Accenture is a Strategic Partner of the World Economic Forum and has been for twenty years**. This is the same WEF that is pushing vociferously the concept of a ‘Great Reset’ in the areas of the economy, society, geopolitics, the environment and technology.

Second, Accenture provide R3 with IT solutions. R3 are an ‘enterprise blockchain software firm’ that run a distributed ledger based platform called ‘Corda’. This is relevant because in 2018, R3 were among several other institutions that took part in a BOE led ‘RTGS Renewal Programme Proof of Concept’. The point of the concept was to see if the systems of R3 and their counterparts could connect to the renewed RTGS. The end result showed that they could.

Back to the Rockefeller’s report on the Covid Testing Action Plan:

Investing in the launch of a health workers corps would allow every community to not only have testing and contact tracing capability but also have a “social distancing/public health workforce.” CHW’s could undertake everything from sanitizing spaces to enforcing separation to spraying sanitizer on people’s hands regularly, particularly where crowds gather.

Digital apps and privacy-protected tracking software should be widely adopted to enable more complete contact tracing. Whenever possible, incentives should be used to nudge the voluntary use of these apps rather than require them.

Platforms and apps can be used not only to identify emerging hot spots but also for developing and operating back-to-work predictive models. Such models can help make decisions about which regions at which times should move from shelter-at-home to work, and, as necessary, back to shelter-at-home again.

Fit-bits, smartphones, smart thermometers and other digital tools can be used to uncover clusters of infections before patients flood local emergency rooms, allowing public health officials to redirect testing resources and rapidly initiate contact tracing.

Fully controlling the Covid-19 epidemic requires that we test the majority of the population weekly. Since we are far from that kind of capacity, **the United States must undertake immediate and intense efforts to invest in new tests and ways of providing near-immediate diagnostic results**.

Innovative digital technologies can improve workforce monitoring and early detection of recurrent outbreaks

When integrated into national and state surveillance systems, such innovations may enable the same level of outbreak detection with fewer tests. Promising techniques include anonymous digital tracking of workforces or population-based resting heart-rate and smart thermometer trends; continually updated epidemiological data modeling; and artificial intelligence projections based on clinical and imaging data.

[...] Start as early and quickly as possible, scale diagnostic testing in at-risk populations, **not just those with symptoms**, invest in the health workforce, and leverage technology.

Further, travel and commerce will not truly be able to reopen unless there is sufficient global production and deployment of tests and ultimately vaccines.

We therefore propose the creation of a Pandemic Testing Board (PTB), akin to the War Production Board that the United States created in World War II, in order to massively scale up production and deployment of testing.

In order to deploy testing at scale, there will need to be sufficient personnel to test individuals outside of hospitals and doctors' offices. The PTB would: craft recommendations for states **to use the national guard to deploy testing** in conjunction with business, labor, nonprofits, and academia; if necessary, be authorized to create a **Pandemic Response Corps**, comprised of tested civilians, to assist in the testing; make recommendations on tracking the spread of the virus; before disbanding, craft recommendations on long-term preparedness.

The **Rockefeller Foundation** was established in May **1913**, the **FED** in December **1913**, and **WWI** broke out in July **1914** (start of the end of empires). Daughter of Nelson Aldrich, who strongly influenced the Federal Reserve Act, married into the Rockefeller family.

“The Rockefeller Foundation, the unparalleled 20th century health philanthropy heavyweight, both profoundly shaped **WHO** and maintained long and complex relations with it, even as both institutions changed over time.”

Source: *[The Rockefeller Foundation played critical role in Chinese medical history.](#)*

The Gateses

Two quotes from the US National Intelligence Council's report *[The Global Infectious Disease Threat and its Implications for the United States](#)* (2000):

WHO defenders blame continued member state parsimony that has kept **WHO's** regular biennial budget to roughly \$850 million for several years and **forced it to rely more on voluntary contributions that often come with strings attached** as the cause of its shortcomings. (p. 36)

Another major change in the global health arena over the last decade is **the increasingly important role of NGOs** [...] At the same time, health experts note that **NGOs, like their governmental counterparts, are driven in part by their own self interests**, which sometimes conflict with those of host and donor governments. (p. 37)

The Gates Foundation is the **largest private donor** to the WHO.

Frederic **Taylor Gates** was the principal business and philanthropic advisor to **David Rockefeller**. It is not a coincidence that Steven **Taylor's** book *Psychology of Pandemics: Preparing for the Next Global Outbreak of Infectious Disease* was published right before Covid. In his **own words** (17 March 2020): “If the Covid-19 pandemic seems unreal for you, it has been doubly surreal for me. For almost two years, I had been working on a book titled *The Psychology of Pandemics*, which was published in **December 2019. A few weeks after publication, Covid-19 emerged** and the spread of infection reached pandemic proportions. In the final chapter of my book I had a section titled 'A portrait of the next pandemic'. **Virtually everything described in that chapter has happened already. That chapter was originally written over a year before the world had encountered Covid-19.**” With

regard to vaccines, he says in the book: “Incentives may come in the form of 'nudges'; for example, public service announcements about the importance of '**doing it for the herd**' by getting vaccinated.” Nice choice of words, Steven. The herd. Not the community, or collective, but herd. It seems the Taylors and Gateses play the role of *shepherds* in this case.

Robert Michael **Gates** is a former Chairman of the **National Intelligence Council** (1983–86) and **Director of the CIA** (1991–93).

Gates White McGarrah II was the first president of the **Bank for International Settlements** and his grandson Richard McGarrah Helms was a former **Director of the CIA** (1966–73).

Bill is clearly part of one of the most influential and evil families in the world.

The Schwar(t)zes

Who else is a Schwarz? **Lawrence** S. **Schwartz**, former top aide to Governor Cuomo and his current “**vaccine czar**”. He has been a longtime **adviser** to Democratic politicians and he replaced Steven M. **Cohen** at one point, whose “primary role had been overseeing Mr. Cuomo’s transition to the governor’s office”.

I guess the Schwarzes/Schwartzes we have seen in this paper originate from the princely **House of Schwarzenberg**, a German and **Czech** aristocratic family (with a Dutch branch as well – think about **Royal Dutch Shell**), one of the most prominent European noble houses, holding the rank of Princes of the Holy Roman Empire. They also own properties and lands in **Austria**. You will find a **Palais Schwarzenberg** in **Graz**, the birthplace of none other than Arnold **Alois** Schwarzenegger. **Wiki** admits his mother was of Czech descent, and so was his paternal g-grandfather **Wenzel Mach**. The surname Mach should remind you on the famous **Austrian** physicist Ernst Waldfried Josef **Wenzel Mach**, who was born in Moravia, present day **Czech** Republic. His family moved to Slovenia (a neighbor of Austria), where they bought a **castle**, which was **demolished** by the Slovenian government in 1999. They were obviously a very wealthy family. I guess Arnold is related to them. Graz links also to **Hitler**, since Wiki makes sure to inform us (although it denies it) that the mother of Hitler's father, **Alois** Hitler Sr., had been employed as a housekeeper by a Jewish family in **Graz**. As was said in the main part of this paper, Miles recently wrote that Arnold looks like Hitler's relatives, so maybe they are related.

There is something else interesting about Slovenia. If you take a look at its coat of arms, you will see 3 Stars of David at the top that were taken after the coat of arms of the Counts' of Celje /tselye/. These counts were **related** to the **Komnenes** (=Cohens). This, of course, takes us back to the Orlovs, since they also had 3 Stars of David on their coat of arms, and Russia and Slovenia (and the rest of the former Yugoslav republics) are well-known close friends. It is because the people running all those countries behind the scenes are related to eachother.

This also explains the connection between Serbia and Russia. There is nothing special going on there, except the fact that (again) the families running those countries behind the scenes are closely related to eachother. Judging by its coat of arms, we can count in also Albania. As Bond would say in the new movie, "the past isn't dead".

With this, my dear voyagers, we conclude the GBN saga. Sort of. Stay tuned for more. And don't forget to feed Miles's web-kitty.

Forth, and fear no darkness!
