

Sure They Did, Chief

by Miles Mathis

First published July 13, 2025

In the stupidest story of the week, [we find one from the Denver Museum](#) of Nature and Science, which contains alleged dinosaur fossils.

In January, the museum drilled some holes [in its own parking lot] to see about the feasibility of geothermal energy, leading the scientists to drill some [2"] core samples 763 feet below the surface. One stood out, until the realization hit that they had found some vertebrae from a [dinosaur](#).

“In my 35 years at the museum, we’ve never had an opportunity quite like this, to study the deep geologic layers beneath our feet with such precision,” said earth sciences research associate Bob Reynolds, according to [CBS](#). “That this fossil turned up here, in City Park, is nothing short of magical.”

“My jaw fell on the floor,” geology curator James Hagadorn said, according to [The Washington Post](#). “My eyes were about as big as saucers. Finding a dinosaur bone in a core is like hitting a hole in one from the moon. It’s like winning the Willy Wonka factory. It’s incredible, it’s super rare. It was absolutely incredible. The first thing you say is, ‘Are you sure? Is this real? Are you playing a joke on me?’” Hagadorn said. “That’s like finding a diamond deposit under the world’s largest gem store or an archeological site buried underneath the parking lot of an archeological museum.””

Wow, someone in Denver needs to shut that Hagadorn guy up, right. He is about the worst actor of all time, going way off script, practically admitting this is fake. The lie-detector would be off-the-page at this point. That's him above under title, looking a bit like Ed Begley, Jr. “*Are you playing a joke on me?*”

Uh, yeah, he is, since this makes no sense from the first word, as usual. Museums don't normally drill

763 feet below their parking lots in search of geothermal energy. Geothermal energy for what? To light the displays? Is the Denver Museum not hooked up to the local power grid? They have to supply their own energy? Besides, if you drill a hole looking for geothermal energy, you don't take a core sample. A core sample and a hole are the opposite things, obviously. A hole is just a hole, and you can't bring up fossils from a hole you drilled. If you are drilling for geothermal energy, you don't pull up core samples, you test for gas emissions or heat. You are looking for hot water or steam. And if you are drilling such a hole, your drill is going to destroy anything in the path of the drill. When you drill a hole in a piece of wood at home, does your drill supply you with core samples of wood? No, it supplies you with sawdust, doesn't it?

Besides, Hagadorn later admits they have no plans to dig out the entire fossils, since that would require destroying the parking lot and maybe even the museum. Which of course begs this question: then what were they going to do if they discovered a geothermal source? Tap it all through a 2" hole in the director's parking space, via a generator in the lobby? That's what I mean by stupid. The whole thing looks like it was dreamed up by a hallucinating AI, as usual.

The fossil is now on display in the museum's "Discovering Teen Rex" exhibit.

Well, that's convenient for the current propaganda, isn't it? And what is this "teen rex" exhibit? It is an allegedly adolescent T-rex allegedly discovered by teens in North Dakota. Teens discovering teens.

That's the lower jaw on display. Wow, how fake does that look! As usual, they don't seem to be aware that fossils are made of rock, not bone. The teeth don't look like rock, so they can't be fossils. The fossils would be mineralized by local minerals, which wouldn't be dark like that. So all this just tends to confirm that dinosaurs fossils are the usual conjob. If they are real, why fake stuff like this?

Does that look even remotely like the lower jaw of a T-Rex to you? Do T-Rexes have teeth on only one side? Why not dig out the other side or the upper jaw? Did that evaporate? Is a jawbone all in one plane, like a footprint? That's just pathetic.

And guess what, [the teens who discovered this just happen to be Fishers](#), the children of a guy in North Dakota working for. . . [ExxonMobil](#). We should have known. Fisher is a Jewish name, of course.

That little girl allegedly found this fossil. And here are the fossil “preparators” at Denver Museum:

No really. Is preparator even a word? It is, but apparently it is one of those new modern idiot-words created just for this museum job. It is the same as “preparer”, so we aren't sure what the extra letters are for. [You can watch those ladies speak at Youtube](#), if you are so inclined. Just for fun, I studied [the resume of this Natalie Toth](#). She was hired as the chief fossil preparer at Denver Museum in 2017, so she must have had extensive experience in the field and in the lab, right? Well. . . no. She was

previously a workshop facilitator at the Museum in 2010 at age 23—so maybe an intern since she was still working on her Masters—then held several short-time positions in education. She was park paleontologist in the Petrified Forest for less than a year, but we aren't told if she was working on digs there. So we aren't sure what qualified her for this position as chief fossil preparer, though we can guess.

A people search also turned up possible paydirt on her, since her brother Peter Toth, 35, has Reston, Arlington and Herndon on his list, indicating he may be CIA or similar. There is a Peter Toth of Chantilly at LinkedIn, but his resume goes back to 1995, so he is apparently too old to be this Peter Toth. Maybe his uncle.

BEST RESULT 	Natalie G. Toth DENVER, CO	38	Denver, CO Aurora, CO Salt Lake City, UT Centennial, CO Holbrook, AZ Lubbock, TX Grayslake, IL Pilesgrove, NJ	Natalie Krokaugger Marsha Toth Natalie Toth Natalie Toth Peter Toth Terry Toth Kristofer Work Deborah Sadecky Work
Best Results are based on the questions you answered: Name Location Age 30-49				

Toth is a Hungarian name, but she is related to Work, Sadecky, Krokaugger, Freund, Musiala, Gulan and Katawczik, indicating she is Jewish. Also notice she has two listings at Instantcheckmate, indicating some kind of double existence. But both must be her, since both are related to Marsha Toth (her mother) and both have Denver and Arizona on them. We can link her through the first one to Grahams, which helps since they are top peers from Scotland.

Even stranger, through Natalie Krokaugger, this Natalie Toth links us to Samuel Krokaugger of Salt Lake City, [sentenced to life in prison at age 19](#) in 2008 for two homicides. Both Natalie and Samuel are related to Kent Krokaugger, giving us a hard link. Note the date of that press release: **October 18,**

2008: aces and eights. And yes, that event looks faked, since if he pled guilty why was he expected to address “dozens of family members of the victims gathered in the courtroom”? If you plead guilty, there is no trial, so what were all these people doing in a courtroom?

I leave open the possibility dinosaurs are real and that these fakes are simply done to nab funding. But the more I look into it, the less likely that becomes. See [previous papers](#) where I go deeper into this.
